## **Global Economic Briefing**

# Global Inflation and Central Bank Monitor

We discuss the recent central bank meetings and inflation prints around the world.

- We think the Fed, the ECB, and BoE are done hiking in this cycle. Meanwhile, we expect the BoJ to simultaneously remove the NIRP and YCC in January 2024.
- Inflation deceleration continues in the US, EA and UK. China's CPI is in deflationary territory. In Latin America, inflation prints were generally soft.

# Central Bank Monitor

We think the Fed, ECB, and BoE remain on hold through 1H24. BoJ is expected remove YCC and NIRP in January 2024. The EM central banks in Asia are mixed: PBoC lowered the RRR, while there were tightening moves by the BI and Philippines Central Bank. In Latin America, the BCB and BCCh eased, while Banxico and BanRep held their policy rates steady.

The **Fed** left the policy rate in a range of 5.25-5.50% on November 2. They referenced tight financial conditions, amongst other factors, as a reason to hold, with the full effects of monetary policy and tight financial conditions had yet to filter into the economy. Since the meeting, financial conditions have softened, notably on the back of downside surprises in recent non-farm payrolls and CPI. Our US team continues to see a soft landing for the economy, and expects the policy rate to be on hold into 2024, before the first 25bp cut in June 2024.

Similarly, the **ECB** left policy rates on hold at 4.0% in their last meeting and is forecast to remain on hold as they grapple with a slowing economy. In the previous meeting, no announcement was made on PEPP, and we expect forward guidance on PEPP investments to be adjusted in Jan-24, with tapering starting in April-24.

The **BoE** kept Bank Rate on hold at their last meeting, leaving rates at 5.25%. Recent inflation data in the UK affirms our call for a cutting cycle to begin in 2Q24 after inflation is sustainably below 4% at the core level. We expect active sales to end once the cutting cycle starts, although passive roll-off remains in place.

The last **BoJ** meeting saw a change in the flexibility of the conduct of YCC - 1% became a reference rather than ceiling. The shift further affirms our earlier call to bring forward the expected timing to simultaneously remove the NIRP and YCC in January 2024 (with risk to December). Subsequent to the BoJ meeting, the government framed a fiscal package that should further support the inflation outlook in Japan. While our team now expects the BoJ to raise the short-term policy rate from -0.1% to 0%, we only forecast a hike to leave zero interest rate policy in 3Q24.

The **RBA** hiked the cash rate by 25bps to 4.35% at its November meeting, its first hike since June. This was in line with consensus and market pricing, which had moved sharply towards our view of a hike in recent weeks after a run of strong data. Throughout the pauses we have consistently flagged the likelihood that the RBA would need to restart tightening, and we still think it is unlikely the RBA's tightening cycle is done, and we see a final hike to 4.60% in February.

The **Riksbank** remained on hold in a close call, with forward guidance for another data-dependent move. The **Norges Bank** remained on hold as well, re-affirming its guidance for a 25bp hike come December, while also explicitly noting the chance of a hold should inflation display downward momentum. We believe the Riksbank has reached its terminal rate at 4.0%, but see a hike in December by the Norges Bank. The **BoC** continues to hold the policy rate at 5.00%, and we see the BoC on hold with a tightening bias for an extended period.

Over the course of 2024-25, China will aim to reflate its economy, which we expect will be

a more gradual process than 2016-17. On September 14, the **PBoC** announced a 25bp cut in the reserve requirement ratio (RRR). This follows the cuts of 10-25bp in bank deposit rates and 15bps cut in one-year medium-term lending facility (MLF) rate in August, reflecting policymakers' effects to support the economy while protect banks' NIM. The Economic Works Conference in December will be an important signal for the easing path as the PBoC may also consider expanding use of quasi-fiscal tools (such as PBoC relending and PSL) as needed to support the economy.

Under pressure from a stronger dollar and high global rates, **BI** surprised markets with a hike in October. However, we expect the BI to hold at its meeting this week. **Philippine Central Bank** resumed tightening in an off cycle move in late October, signaling follow through policy action to bring inflation back to target. However, the BSP did not hike further in November. The **RBI** remained on hold at its October meeting, and we only expect cuts to begin in 2Q24. The **BoK** remained on hold at its October meeting, and we expect a final hawkish hold at the November meeting.

On November 2, the **BCB** decided to cut rates by 50bp, to 12.25%, as expected, and the communication had a neutral tone, in our view. **Banxico** kept rates unchanged at 11.25% in a unanimous decision on November 9, yet, there was a mildly softer message in the statement, suggesting that rates have to remain at this level for "some" time, versus previous communication suggesting a "prolonged" period. On October 30, **BanRep** left the policy rate unchanged at 13.25%. Although this was a split decision (5-2), the statement contained a few dovish nuances, such as an emphasis in their dual mandate. Going forward, we expect 400bp cuts in 2024, and a further 175bp of easing in 2025. On October 26, the **BCCh** cut rates by 50bp to 9.00% in a unanimous decision, where the authorities stressed concerns over volatile external financial conditions amid a strong US economy that translated into higher US rates.

Following the NBP's pause at its November meeting, we now expect the central bank to keep its policy rate unchanged at the coming December and January meetings as fiscal uncertainty is likely to dissipate only in late January when the new government would have been formed and the 2024 budget bill passed by the Sejm. The **NBH** lowered its base rate by 75bp to 11.50% at its November meeting, in line with our expectations. We continue to expect 75bp of rate cuts per month until mid-2024, when the base rate reaches 6.25%. After a hold at the November meeting, we expect the CNB to deliver a first 25bp rate cut to materialize on December 21, with risks for a delay into February next year. We see an easing cycle continue with back-to-back 25bp rate cuts in Q1. Defying consensus, the CBT raised rates 500bp to 40%, but signalled that it is close to the end of its hiking cycle. We see two further 250bp hikes in December and January, with a terminal rate of 45%. The SARB kept its policy rates unchanged at 8.25% this week, and we believe that the SARB prefers to maintain a tight policy stance until election risks pass. We expect the **BOI** to keep its policy rate unchanged at its upcoming November 27 meeting, and to continue to rely on its other monetary policy tools to support economic and financial stability in addition to the increased fiscal support.

MORGAN STANLEY RESEARCH 5

# Inflation Monitor

US CPI inflation declined again, driven by core goods; headline inflation in the euro area fell due to sharp declines in energy. China's CPI print was in deflationary territory. Inflation prints were moderate across Latin America.

October CPI prints were soft in the US, Canada, euro area, and UK. In Australia, headline inflation rose on the back of housing inflation.

- In the US, the October CPI came in below expectations. Core CPI increased

   0.23%M (annual rate 4.0%Y), driven by the continuing deflationary trends in core
   goods. Core services inflation moved lower as well. The main drivers of the change
   were disinflation in housing, new cars (-0.09%M) and used cars (-0.8%M). Headline
   inflation was soft at 0.0%M (0.045%M unrounded), down from 0.4%M in

   September, and was largely driven lower by energy prices.
- In the **euro area**, the headline HICP in October was softer than expected at 2.9%Y, declining by 140bp relative to September. This was the lowest print since July 2021. This was largely driven by relatively food (7.5%Y from 8.8%Y in September) and energy( -11.1%Y from -4.6%Y in September). The deceleration in core goods and services continued, and core inflation declined to 4.2%Y (from 4.5%Y in September).
- In the **UK**, the October CPI print was soft at 4.6%Y (relative to 6.7%Y in September), and the sizeable drag in energy contributed to much of the decline (-15.7%Y relative to -0.2%Y in September). Core CPI inflation fell to 5.7%Y, down from 6.1%Y in September. The decline in core services was due to the drag from used car prices, hotel prices, health insurance, and the sharp drop in core services ex-admin prices & rent. Core goods also continued to be soft, with used car prices collapsing in particular.
- In Japan, headline inflation in October (3.4%Y) has been driven by energy and food inflation due a sharp rise in import prices on a yen basis. The recent rise in inflation of core goods also reflects the lagged impact from higher import prices. Although Japan's import prices peaked in 3Q22, they would continue to support core goods inflation in 1H23, and we expect that their impact will start to wane gradually in 2H23. Inflation in overall services reached around 2%Y mainly due to those that use import raw materials, such as dining-out and home renovations. Housing rent remains at around 0%Y in the CPI stats.
- In Australia, headline CPI increased 1.2%Q (5.4%Y) in the Q323 print. There was sequential acceleration in the trimmed mean CPI, at 1.2%Q (relative to 1.0%Q in 2Q23). There was easing in core goods (from 6.2%Y to 4.7%Y) and core services (6.8%Y to 6.3%Y). While housing has been a contributor to inflation, there are still significant and temporary drags from government subsidies. These include electricity rebate, new childcare services and Commonwealth rent assistance, and are contributing to temporarily lowering headline inflation momentum.
- In Canada, the headline inflation fell to 3.1%Y in October (3.8%Y in September).
   This was primarily due to lower gas and energy prices. Further, the average of the three-month SAAR of both the trim and median core inflation rates a key measure followed by the Bank fell to 2.96% in October, reaching its lowest point since March 2021. However, offsetting the decline in price pressures on the month

was an increase in services prices, led by shelter and travel prices, which rose at a faster pace in October relative to September

Slowing travel and falling food prices pushed China's CPI into deflationary territory; food prices in India contributed to a stronger than expected CPI in India.

- China's CPI fell to -0.2%Y (versus O%Y in September), driven by monthly declines
  in food, core goods and services. Slowing travel contributed to the core CPI (0.2%
  MoM) being at its lowest level since the reopening. Measures of travel such as
  domestic operated flights and hotel occupancy showed softness relative to
  September.
- In **India**, the headline CPI edged down to 4.9%Y, somewhat higher than expectations. The reversal in vegetable prices, relative to September levels, led to CPI gaining 0.1% MoM in October vs. -1.1% MoM in September. Core CPI (ex food, fuel) softened to 4.3%Y in October from 4.6%Y in September.
- In **Korea**, the October headline CPI rose to 3.8%Y from 3.7%Y. However, as the sequential monthly pace of inflation continued to decline, we see this as a temporary rise rather than a trend-rise across the basket. Meanwhile, core inflation slowed to 3.2% Y from 3.3%Y in September. Personal service inflation has been sticky, hovering around 4%-level, and remains a concern.

Inflation decelerates in Turkey but remains elevated. Poland and Hungary experience broad-based disinflation.

- In **Turkey**, the October CPI inflation was 3.4%M and 61.4%Y. Monthly inflation momentum has declined due to waning effects of tax hikes, FX and wage adjustments, but remains high. While headline CPI declined slightly compared to September (61.5%Y), core inflation (C-index) increased by 0.8pp to 69.7%Y. This was mainly driven by the rise in services inflation (to 88.6%Y from 86.5%Y) while core goods inflation declined slightly (to 53%Y from 53.2%Y).
- **Poland's** October CPI print came out at 6.6%Y, down from 8.2%Y in September. The main driver of the disinflation was food inflation, which dropped significantly to 8.5%Y from 10.4%Y in September. Housing-related energy and fuels inflation were also a drag to inflation, decelerating to 8.3%Y and -14.4%Y from 9.9%Y and -7%Y respectively. Core inflation eased to 8%Y against 8.4%Y in September.
- In the **Czech Republic**, October inflation was 8.5%Y, up from 6.9%Y in September on the back of unfavorable base effects in housing-related energy prices. Apart from the unfavorable base effects, food inflation continued to ease, now standing at 3.7%Y against 6.0%Y in September. Core inflation decelerated further and reached 4.2%Y against 5.0%Y in September.
- Hungary's October CPI came out at 9.9%Y, showing further deceleration from 12.2%Y in September. The deceleration was broad-based, as food, housing-related energy and fuels all decelerated relative to September prints. Core inflation, including processed food also fell, from 13.1%Y in September to 11%Y in October.

Inflation continues to moderate in Latin America.

 In Mexico, disinflation continues to show in the 2H/Oct 2023 data. Headline CPI was down to 4.25%Y (4.27% in 1H/Oct) and core moderated to 5.46%Y (5.54% in

- 1H/Oct). Core services continued to post pressures, with the bulk centered around tourism. Other services ex tourism also saw some pressures.
- In Colombia, CPI moderated to 10.5%Y in October, compared to 10.99%Y in September. Core CPI showed sequential disinflation (0.2% m-o-m in October, versus 0.4% m-o-m in the previous month). The muted numbers were driven by negative monthly prints in durable goods; core services were also soft due to lower owner's equivalent rent.
- In Chile, headline and core CPI continued to moderate. Headline print was 5.0%Y
   (5.1% in September), while core was 6.5%Y, relative to 6.6%Y in the previous
   month. Core services were muted (0.1% m-o-m), reflecting anemic domestic
   demand, and core goods were deflationary at the margin. Pressures on headline
   were mostly driven by non-core items such as food and energy, which were in turn
   pressured by FX and oil prices.
- In **Brazil**, the October IPCA decreased to 4.8%Y, relative to 5.2%Y in September. The bulk of the downside surprise came from health (4bps) and transportation (3bps). Seasonally adjusted core average inflation decelerated to 0.2% m-o-m, from 0.30% m-o-m in September. Among non-core items, food is back to inflationary territory for the first time since May, pushed by fresh produce in general and beef.

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflictpolicies. A Portuguese version of the policy can be found at www.morganstanley.com.br

#### **Important Disclosures**

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited (\*MSTL\*). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
