Disney, DeSantis **End Feud Over Tax** District

Entertainment giant has been in a longrunning fight with Republican governor

BY JOSEPH DE AVILA AND ROBBIE WHELAN

Walt Disney backed down Wednesday from a long-running legal battle with Florida Gov. Ron DeSantis over control of the Orlando-area land that is home to its most important resort, ending a yearslong feud and handing the governor a political victory.

The company's truce with the Central Florida Tourism Oversight District, the entity that oversees the resort's land and infrastructure, gives De-Santis more power and influence over the company's Florida operations. It also paves the way for Disney to expand its theme parks and resort properties in the state.

"Everything we've done has been in the best interest of the state of Florida," DeSantis, a Republican, said Wednesday. "We've been vindicated on all those actions."

Jeff Vahle, president of Walt Disney World, said he is pleased to end the litigation with the district, which is over-Please turn to page A4

FTX's Planned Reboot **Never Got Off Ground**

BY ALEXANDER OSIPOVICH AND ALEXANDER SAEEDY

The lawyers and advisers running FTX's bankruptcy spent more than half a year and millions of dollars in fees to explore the idea of restarting Sam Bankman-Fried's failed cryptocurrency exchange. In the end, they decided it wasn't worth it.

To outside observers, it might seem far-fetched that FTX could be revived after it collapsed with an \$8 billion hole in its balance sheet and its top executives were charged with fraud. But the idea of rebooting the exchange in some form-dubbed FTX 2.0-won support among major creditors. Dozens of prospective buyers expressed interest.

As crypto prices rallied late last year, however, the billions of dollars of crypto still under FTX's control jumped in value, and it became feasible for the company to repay its customers more or less in full. By returning 100 cents on the dollar, the management team steering FTX through bankruptcy could declare its job done, with no need to restart the exchange.

Some creditors said the bankruptcy estate missed an opportunity to create a valuable business from the ashes of FTX, formerly one of the world's most popular crypto exchanges. "They are responsible for

U.S. NEWS A Port Community Fears More Hardship

With bridge gone, those who live or work in the area say they are anxious

BY CAMERON MCWHIRTER

EDGEMERE. Md.-For decades, the Sail Inn has been a mainstay bar and restaurant in this small community, tucked away near the Patapsco River just outside the city of Baltimore.

Many customers who worked at the nearby port came in its doors during their lunch break or to grab a beer after their shift. Other customers drove over from residential communities on the opposite side of the nearby Francis Scott Key Bridge.

Suddenly, the bridge is gone and the Port of Baltimore is indefinitely closed. The collapse has also upended the futures of the bar, other businesses and workers throughout the region. The bodies of two victims were recovered Wednesday, and four others are presumed dead in the disaster.

'We are concerned about the local economic impact, with some 8,000 jobs directly associated with port activities," Transportation Secretary Pete Buttigieg said, adding that the impact could ripple beyond the immediate region.

On Wednesday morning, Sail Inn owner Donna Kondylas sat at the bar near signs for the hometown Baltimore Ravens and the Orioles, fidgeting with her phone and worrying.

'We made it through Covid. Now we've got to make it through this mess,' says Donna Kondylas, owner of the Sail Inn.

"This is a blue-collar bar, what happens if paychecks stop coming in from the port?" she said. "We made it through Covid. Now we've got to make it through this mess.'

Kondylas, 67 years old, said she wept when she first heard the news of the collapse. "How are we going to survive?"

The collapse of the bridge offered another gut punch for a city that has had its fair share. Baltimore City has battled high

homicide and violent-crime Bureau of Labor Statistics. The rates. Parts of Baltimore County, which surrounds much of the city, have also struggled.

And people have moved out of county neighborhoods, including in Edgemere, which took a hit when a Bethlehem Steel plant closed years ago in nearby Sparrows Point.

Manufacturing employment for the Baltimore area has dropped sharply in recent decades, according to the U.S.

area around the port had seen some progress in recent years: people had moved in to work for new distribution centers and warehouses for Amazon.com, spice company Mc-Cormick, and other companies that built on the site of the old Bethlehem Steel plant.

In and around Edgemere, streets are lined with small homes with large trucks parked in the driveways. It is a community filled with people who work at a port-related business or have relatives who did or still do.

On Tuesday evening, speaking at a vigil in Dundalk, Md., near the bridge collapse, Baltimore Mayor Brandon Scott noted his city's response to past tragedies, saying "whenever there is a tragedy, we come together."

On Wednesday, those in this struggling area of a struggling metro wondered how to do just that.

Dave Klaas, 71, a retired construction worker who has lived his whole life in the Baltimore area, visited a grocery store in Edgemere. Nearby, a volunteer firehouse had lowered the Maryland state flag to half-staff. "It's scarv." Klaas said. "Everyone's home, hunkered down. Maybe they won't have a job anymore."

Carl Hobson, who worked for decades as a welder in the area and lived in this part of Baltimore County all his life, remembered bicycling on the Key bridge when he was a boy before it opened to traffic. Later he worked on crews near the bridge and parked his truck underneath it. His wife and daughter commuted over the bridge to their jobs every day. He estimated his daughter, a nurse, would drive about 40 minutes each way to the hospital where she worked.

Now that trip will take about 11/2 hours each way, he said, sitting down at a diner for lunch.

"It's changed our landscape and it will change our lives for a long time," said Hobson, 59.

His friend sitting with him, Calvin Roff, a retired maintenance worker, said many of their friends work at the port or port-related businesses. They are all worried, he said. "There are so many people who work at the port," he said. "I don't know what we're going to do."

-C. Ryan Barber, Jon Kamp and Scott Calvert contributed to this article.

Victims Remembered By Relatives

Continued from Page One into a pillar near where the repair crew was stationed. Almost instantly the bridge crumpled. Eight men fell into the Patapsco.

Two were rescued. State police said on Wednesday that the bodies of two people were recovered from the site.

The other four are presumed dead, authorities said. About 50 divers have been frantically trying to find the

open a vital shipping lane blocked by the collapsed bridge. Jennifer Homendy, the chair of the National Transportation Safety Board leading the investigation, said Wednesday that investigators had interviewed the captain, first mate, chief engineer and others of the containership Dali, a Singaporean vessel. The agency also recovered a voyager data recorder, which Homendy said was much more basic than

and debris. "We have exhausted all search efforts and the areas around this wreckage," Butler said.

Earlier in the day state officials said crews recovered the bodies of Alejandro Hernandez Fuentes, 35 years old, and Dorlian Ronial Castillo Cabrera, 26, both construction workers who were on the bridge when it collapsed. The bodies of the men—which were recovered from the site on Wednesday morning, according to state police—were inside a red pickup truck that was submerged in roughly 25 feet of water near the bridge's middle span.

missing men in murky water 🖺 steel from the bridge.

The National Transportation Safety Board said it has recovered the data recorder from the Dali containership.

Just before government officials briefed the public Tuesday evening, around 40 family members were notified in a state transportation department building nearby. The Red Cross brought donated food from a local seafood restaurant. Some relatives left the building in tears. Others were mad.

"Why did we come here? For nothing. There's no information," Carlos Suazo, whose brother Maynor is among those presumed dead, said while smoking a cigarette. "The U.S. is going to rebuild that bridge one day [and] what we don't want is for the bodies to stay there. We want them to be recovered."

Maynor Suazo, 37 years old, was the youngest of eight children from a family in Honduras and came to the U.S. around 2003. Carlos Suazo described his younger brother as chatty and jovial, the type of person who loved to throw parties and always had a full

house at Christmas. Maynor Suazo started working for Brawner in October. The last time the two brothers saw each other was Sunday.

"For my mom, I think this is the worst information she has ever received," Carlos Suazo said while showing a photo of another brother in Honduras consoling their mother. "Maynor was her baby, the spoiled one."

a "black box" aboard an aircraft, as well as the cargo manifest.

Homendy said the investicould gation take between one to two years, though she added the

agency could issue safety recommendations earlier.

The NTSB is in possession of six hours of recordings including the time period from midnight to 6 a.m. Tuesday, which covers the time of the collision. Homendy said there should be a total of 30 hours on the data recorder, which would come later.

NTSB Investigator Marcel Muise said the data on the recorder would be limited to sensors from the bridge of the ship, such as GPS data, audio from the bridge and rotor commands. Other items, such as the temperature of each of the ship's cylinders and information from power-distribution sensors-aren't on a voyage data recorder, Muise said.

Homendy said it was too soon to say whether the NTSB would be able to determine why the ship malfunctioned.

As the investigations start to take shape, officials are moving away from recovery mode because divers are no longer able to safely navigate around the debris, said Col. Roland Butler Jr., the superintendent of the Maryland State Police. Based on sonar scans, authorities said vehicles are likely encased in the concrete

The men were part of a crew of six workers who were filling potholes on the Francis Scott Key Bridge when the ship struck the span.

Authorities are reaching out to families of the six people who died in the immediate aftermath. Their families are from Mexico, Guatemala, El Salvador and Honduras, officials said.

The disabled ship Dali ran into a support pillar and caused much of the bridge to tumble into the Patapsco River at about 1:30 a.m. Tuesday.

Officials gave no timetable for when the waterway might be cleared, but Vice Adm. Peter Gautier said "the Coast Guard's highest priority now is restoring the waterway for shipping," removing the stricken vessel and coordinating on the casualty investigation.

Transportation Secretary Pete Buttigieg declined to say when ships again will be able to reach most of Baltimore's port, which can't happen until debris and the ship are removed from the disaster site. About a dozen ships are still in the port-mostly foreignflagged vessels—that can't get out because of the blocked waterway, Gautier said.

The Dali is stable, but it has more than 1.5 million gallons of fuel and lubricating oil on board along with 4,700 cargo containers, and the ship's bow is pinned under bridge debris that must be removed.

U.S. Sets Draft Rules On Cyber Incidents

By JAMES RUNDLE

The U.S. Cybersecurity and Infrastructure Security Agency on Wednesday published longawaited draft rules on how critical-infrastructure companies must report cyberattacks to the government.

CISA developed the rules after President Biden signed the Cyber Incident Reporting for Critical Infrastructure Act into law on March 15, 2022. Officials hope reports from companies in a range of industries will allow them to better spot attack patterns and improve defenses.

Under the rules, companies that own and operate critical infrastructure would need to report significant cyberattacks within 72 hours and report ransom payments within 24 hours.

Companies have opposed reporting requirements, saying assessing an attack early on is difficult. They also worry disclosing too many specifics may aid attackers by revealing details of incident-response processes and cyber defenses.

This is the first time the federal government has proposed a comprehensive set of cybersecurity rules across critical-infrastructure sectors. CISA is seeking public comment for 60 days.

The rules apply to any company owning or operating systems the U.S. government classifies as critical infrastructure, such as healthcare, energy, manufacturing and financial services. The rules will also apply to companies that don't operate critical infrastructure, but whose systems may be vital to a particular sector, such as service providers.

'Reporting from a broad range of entities is necessary to provide adequate visibility of the cyber landscape across critical infrastructure sectors, which CIRCIA is meant to facilitate," CISA said in its 447page draft.

There are exemptions for small organizations, with revenue and employee counts that qualify under the Small Business Administration's criteria.

While the rules will require companies to report "substantial" cyberattacks within 72 hours and ransom payments

Former senator, Gore's running mate in 2000, is mourned as a 'true mensch'

By JOHN MCCORMICK AND TALAL ANSARI

Joe Lieberman, the former longtime Connecticut senator and moderate Democrat who served as Al Gore's vice presidential running mate in 2000, has died, his family said in a statement. He was 82.

Lieberman's death Wednesday afternoon in New York City followed complications from a fall, his

OBITUARY JOE LIEBERMAN 1942-2024

were with him as he passed, his family's statement said. "Senator Lieberman's love of God, his family, and America endured throughout his life of service in the public interest."

Lieberman most recently was the founding co-chair of No Labels, an independent group laying the groundwork for a potential centrist "unity ticket" for this year's presidential election.

The former senator's decadeslong political career began in 1970, when he was elected to Connecticut's state Senate. From 1983 to 1989, he was the state's attorney general.

He was voted into the U.S. Senate in 1988, defeating three-term incumbent Lowell Weicker, and spent roughly a quarter-century in the chamber. Lieberman was an early supporter of former President Bill Clinton, though he criticized him after Clinton's affair with White House intern Monica Lewinsky.

Gore picked his running mate in part because Lieberman's aura of sobriety and righteousness provided some inoculation against the impeachment of Clinton, whom

Lieberman left the Demo-

Saturday.

Lieberman drew the ire of many Democrats with his support for the Iraq war, his open support for the GOP presidential campaign of then-Arizona Sen. John McCain in 2008, and his divergence from the Democratic Party line on healthcare. During the 2010

Senate debate on the healthcare overhaul now known as Obamacare, Lieberman blew up a compromise on the socalled public option backed by the party's liberal wing.

Still, even as an independent, Lieberman was counted as a reliable vote for Democrats on most matters. He led the charge for repealing the military's ban on gay and lesbian Americans serving openly in the military, and backed restricting greenhouse-gas emissions tied to climate change. Facing a tough reelection fight in the 2012 cycle, he decided not to seek another term and left the Senate in early 2013.

More recently, Lieberman said he was surprised by how "viciously" Democrats have reacted to No Labels. He said the attacks didn't faze him. "Look, we're doing something different, so we are a threat to the two major parties," he said in an interview with The Wall Street Journal in December.

"I don't have any need for revenge, but I'm pained by what's happened to the American political system, and I think, honestly, it threatens our future," he said.

Former Sen. Norm Coleman of Minnesota, chairman of the Republican Jewish Coalition, called Lieberman "a true mensch and a great American."

within 24 hours, CISA said authorized activity resulting in a cyber incident doesn't trigger a reporting obligation.

Noem, in Mix For VP Spot, **Gets Scrutiny**

Trump has talked up the South Dakota governor, but they differ on some issues

By Kristina Peterson

WASHINGTON-As the chances that former President Donald Trump will pick South Dakota GOP Gov. Kristi Noem as his running mate are growing, so too is scrutiny over everything from her policy positions to her new teeth.

Her stance on abortion. Her opposition to TikTok. And most puzzling to many, her decision earlier this month to post a lengthy video on Instagram praising a cosmetic dentistry practice in Texas for fixing her teeth.

Noem, 52 years old, has declined to say whether she paid for her own dental work, raising questions about whether she filmed the testimonial in exchange for services.

"Participating in an ethically dubious commercial is just odd," said Brendan Buck, who served as spokesman for former House Speaker Paul Ryan (R., Wis.) when he was the 2012 GOP vice presidential nominee. For that role, "are you picking a person who is going to thoughtfully advance and amplify your message or are you picking somebody who is going to become a distraction? This felt like a distraction," Buck said.

Noem spokesman Ian Fury criticized the focus on her controversies rather than her policy accomplishments, adding: "Much like Donald Trump, Governor Noem has never been a Washington, D.C., insider."

Trump, who met one-onone with Noem at Mar-a-Lago in late February, has enthusiastically talked her up as a possible running mate in recent discussions, according to people familiar with the talks. She appeared on stage with him at a rally in Ohio earlier this month, wearing a "Make America Great Again" hat and praising his leadership.

But Trump's advisers are hoping to find a running mate who could help win over voters wary of hard-line abortion restrictions, an issue that helped fuel Democratic wins in the 2022 midterms after the Supreme Court struck down Roe v. Wade. That could be a mark against Noem in the Trump campaign's calculations.

Abortion is prohibited in South Dakota, except to save the mother's life. Earlier this month, Noem signed into law a bill allowing people to rescind signatures from petitions for ballot measures. That bill is seen by opponents as an effort to siphon support for a measure aimed at restoring some abortion rights in the state.

Supporters have gathered about 55,000 signatures for the proposed amendment to the state constitution, which would largely restore South Dakotans' ability to get abortions in the first and second trimesters. The measure needs around 35,000 signatures to qualify for the ballot.

Noem is also at odds with Trump's recent criticism of legislation passed by the U.S. House that would ban TikTok unless its Beijing-based parent company divests its U.S. operations. Under Noem, South Dakota in late 2022 banned

* *

Gov. Kristi Noem with former President Donald Trump at a South Dakota Republican Party rally in Rapid City in September.

Video Praising Dental Work Raises Some Eyebrows

South Dakota GOP Gov. Kristi Noem has drawn skepticism over her decision to post a five-minute video March 11 detailing her experience getting her teeth fixed at SmileTexas, a cosmetic dentistry practice in Sugar Land, Texas.

Noem said her front teeth were knocked out while riding her bike with her children years ago. "The team here was remarkable and finally gave me a smile that I can be proud of," she said. The Instagram post isn't labeled as an advertisement, and Noem has refused to answer questions about whether she paid for her own dental work.

Noem likely didn't violate any legal statutes, but promoting a specific business could be considered conduct unbecoming of a public official, said Michael Card, professor emeritus of political science at the University of South Dakota.

"That's what I do all the time for a lot of businesses, so it's silliness," she said when asked about the post recently.

TikTok on state governmentowned or leased devices.

And while Noem is a vigorous cheerleader for Trump's immigration and tax policies, she hasn't endorsed some other tenets of his agenda. At a House Agriculture Committee hearing last week, she sidestepped a question about Trump's plans to levy tariffs on U.S. imports, which could hurt U.S. farmers were they to spark a trade battle. "I think that is a proposal that people are still looking at," Noem said.

The 1990 South Dakota "Snow Queen," Noem grew up working on her parents' farm and cattle ranch in the northeastern part of the state. She became the general manager of the farm's business operations after her father died in a grain-bin accident when she was 22 and eight-months pregnant with the first of her three children.

"She's a smart, tough farm kid," said state Sen. Lee Schoenbeck, a Republican who at times clashed with Noem as governor.

Noem served in the South Dakota Legislature before being elected to the U.S. House in 2010. In Washington, she slept in her House office and dressed down her own GOP

leaders when a version of the farm bill, which sets agricultural policy, failed in 2013. After four terms in Congress, she was elected governor of South Dakota in 2018 and reelected in 2022.

She drew national attention for her more hands-off approach during the Covid-19 pandemic, refusing to institute a mask mandate and reopening schools earlier than many other states—moves that were popular in conservative South Dakota. But she also later tangled with the GOP-controlled legislature, which didn't embrace her 2022 campaign pledge to eliminate the state's 4.5% sales tax on groceries.

In late 2021, the state legislature's GOP-controlled Government Operations and Audit Committee found that one of Noem's daughters was given preferential treatment by the state labor and regulation department after she didn't initially qualify for her state-certified real-estate appraiser's license. A spokesman for Noem has said that she didn't seek special treatment for her daughter and that she didn't receive any.

Continued from Page One seen by a board handpicked by the governor.

Disney, DeSantis

Settle

"This agreement opens a new chapter of constructive engagement with the new leadership of the district and serves the interests of all parties." Vahle said.

Disney is under pressure to show investors that it is righting the ship amid a contentious proxy fight with activist investor Nelson Peltz. The settlement clears a roadblock to announcing the details of planned investments in its parks business. Its annual meeting is scheduled for April 3.

Disney shares rose about 1% Wednesday.

Under the terms of the settlement, Disney agreed to the nullification of a 30-year development plan that Disney Legislature passed a law to rushed through

the approval process a year ago in an attempt to circumvent the new DeSantisbacked board. Disney must now follow an earlier, less-expansive land-use

tractions and hotel properties.

Before the settlement, Disney had been wary of announcing the details of any largescale development plans because of the legal fracas, according to people familiar with the matter.

The roots of the conflict between Disney and DeSantis go back to early 2022, when Disney, under pressure from LG-BTQ employees and advocacy groups, publicly opposed Florida's Parental Rights in Education bill.

The legislation, championed and signed into law by DeSantis, became a political lightning rod, known by its opponents as the "Don't Say Gay" legislation. It prohibits instruction on gender and sexuality in schools.

The truce gives Gov. Ron DeSantis more power and influence over the entertainment company's Florida operations.

DeSantis went on the warpath, calling Disney a "woke corporation" that was out of touch with the concerns of Florida families. After launching an unsuccessful bid for the 2024 Republican presidential nomination, he frequently used Disney as a punching bag at campaign events.

The confrontation crescendoed last year, when the Republican-controlled Florida strip Disney of

its

authority over the Reedy

Creek Improve-

ment District, a

lows the company to grow its operations by building new at-land and infrastructure for more than 50 years.

sive

Lawmakers renamed the district and gave the governor sole power to appoint its supervisory board, which he stacked with political allies and donors. Some of them criticized Disney, saying the company had for years received special treatment that gave it unfair advantages in the tourism industry.

Disney CEO Bob Iger last year called DeSantis's attacks on the district "antibusiness" and "anti-Florida" and said that some \$17 billion in new development and tens of thousands of new jobs hung in the balance.

Bryan Griffin, a spokesman for DeSantis's office, said no corporation should be its own

government, but both he and DeSantis struck a conciliatory tone with the company.

The governor said he was optimistic that the board would be able to negotiate a new expansion plan with Disney successfully.

Settling their legal differences is worthwhile for Disney so it can focus on longer-term plans, said Jeff Brandes, a former Republican state senator in Florida.

"They're saying, 'We fought him for a year, delayed everything, and now we can move ahead," Brandes said. "Disney plays the long game. If Disney stalls projects, that hurts Disney, but it also hurts Florida."

In January, a judge dismissed a federal lawsuit brought by Disney that alleged that DeSantis and his allies retaliated against the company for opposing the law restricting classroom instruction on gender identity and sexual orientation.

As part of Wednesday's settlement, Disney put a planned appeal on hold so it can try to negotiate a new development agreement and settle other matters with the state.

Recent changes to the district's board have shown signs of a thaw in the relationship between Disney and DeSantis, said Rick Foglesong, an emeritus professor of political science at Rollins College, near Orlando.

"This imbroglio wasn't working for either of them,' Foglesong said. "DeSantis gets to declare victory, Disney can go back to its investment plan. and hopefully the culture warriors will start to lay off Disnev."

Financing the Green **Revolution: Canada's** Critical Mineral Advantage

Critical minerals are the cornerstone of the green revolution. Canada's proactive actions to enhance its critical minerals sector through global investment signify its readiness to meet the surging global demand head-on.

The global landscape presents a pressing economic and geopolitical challenge: the journey towards digitization and decarbonization necessitates an extensive range of critical minerals, including copper, nickel and lithium, in unprecedented quantities. Projections indicate a staggering 350% increase in demand for critical minerals by 2050, according to the International Energy Agency.

While the energy transition is a main driver for surging critical mineral demand, the mining and processing landscape is largely geographically concentrated, with a select group of countries holding significant sway.

Canada emerges as a pivotal player in this geopolitical context, boasting abundant resources, a stable jurisdiction, and a commitment to

of new and alternative investors in the sector as one of the biggest trends," she says.

In recent trends, both automotive and battery manufacturers are actively investing in new critical mineral mining projects and securing offtake agreements to guarantee a stable supply of minerals vital for their manufacturing processes.

sustainability. It presents opportunities for investors seeking to capitalize on the critical minerals market's growth and the transition to a green economy.

"There is a funding gap between the opportunity before us and where we are right now."

Laurel Broten, CEO, Invest in Canada

Bridging the Funding Gap

"Investment, innovation and private sector involvement fueled the industrial revolution," says Laurel Broten, CEO of Canada's national investment and promotion agency, Invest in Canada. "We need the same for today's green revolution. There is a funding gap between the opportunity before us and where we are right now."

It will take a multi-pronged approach to solve this mismatch between the high demand for critical minerals and short supply of capital. These measures include government support and de-risking mechanisms, plus co-operation between mining companies and their customers, banks and institutional investors.

But there could be many winners, says Dan Myerson, executive chairman and CEO of Canada's TSX-listed Foran Mining: "We are hitting a new critical minerals commodity cycle-and for those willing to invest, there is potential for great outperformance."

Meeting Demand: The Critical Mineral Imperative

Critical mineral-related projects are capital-intensive and take time to generate returns, given the need to explore and develop mines before a project can produce revenues. Mairead Lavery, president and CEO of Export Development Canada (EDC), has noted a surge in demand for critical minerals essential to the transition toward a net-zero economy. Through its tailored financial solutions, market insights, and extensive global network, EDC plays a crucial role in supporting Canadian companies and projects involved in critical mineral supply chains, both domestically and internationally.

"While there are inherent risks associated with developing new critical minerals projects, the undeniable demand for critical minerals to enable the transition to a net-zero economy means we're seeing the emergence Governments are also stepping in by initiating funding programs, such as Canada's Critical Minerals Infrastructure Fund (CMIF), to support the development of critical mineral projects, including measures to facilitate Indigenous ownership and access to capital – something Lavery says is not only required but beneficial for resource development to succeed in Canada.

Canada's Strategic Investment Framework

Home to 60 metals and minerals—including 31 that are classified as critical—Canada has made attracting international investment to the sector a national priority. Already a top destination for mining investment over the past decade, accounting for 22% of the global share by value, according to the Prospectors & Developers Association of Canada, the federal government set aside a C\$3.8 billion (\$2.8 billion) eight-year program in 2022 to fund its critical minerals strategy. The initiatives aim to de-risk investment, particularly at the pre-production stage, and support the critical mineral sector's growth.

Taken together with a concerted effort by all levels of government in Canada to streamline approvals, a supportive regulatory framework and competitive tax and exploration incentives at both national and provincial-territorial levels, it is "the best location for critical minerals investment," according to Myerson, who has also worked in other markets, including on the African continent and in Australia.

"The feedback we've had is that investors like Canada's stable jurisdiction and our commitment to sustainability," he says of Foran's copper project in Saskatchewan.

With a commitment to critical mineral projects and value chains, Canada is leading the charge globally. "The energy transition is happening right now and we need critical minerals to make it happen, says Invest in Canada's Broten. "Without them, our aspirations for this transition simply can't materialize. That's why the time to invest in critical minerals is now and the place to invest is Canada."

McDaniel's Saga Shows Peril of Election Denialism

By JOHN MCCORMICK

The decision by NBC News to cancel its on-air-analyst contract with former Republi-National Committee can Chairwoman Ronna McDaniel is a stark reminder of how election denialism remains a divisive and burdensome topic for the GOP as it fights to win the White House and other contests this year.

That weight is also on members of the media who try to present both sides in a presidential race expected to be fiercely competitive and featuring one participant former President Donald Trump-who continues to insist falsely that the 2020 election was stolen from him.

Navigating that terrain, as both McDaniel and NBC discovered, is tricky given the fact that polls show as many as one-third of Americans think President Biden wasn't legitimately elected. That number surges to close to two-thirds among Republicans who have participated in some of this year's caucuses and primaries.

McDaniel, who NBC dismissed just days after announcing what was believed to be a three-year deal valued at nearly \$1 million, has had her share of Trump-associated ups

her to the national stage, but she was booted by him from the RNC even after years of kowtowing. She then crossed him by suggesting Biden was fairly elected and got booted again, by NBC.

"It's an indication that, going forward, that if you are a messenger of election denialism that you may not maintain the credibility to be given a voice in many places in the public square," said Rob Stutzman, a GOP consultant who has done work for the thirdparty No Labels movement. "The awful lie of the election being stolen is going to continue to limit who will take them seriously in the future."

Trump factor

Trump weighed in on his social-media platform Tuesday evening to mock his former ally: "She only lasted two days, and this after McDaniel went out of her way to say what they wanted to hear. It leaves her in a very strange place, it's called NEVER NEV-ERLAND, and it's not a place you want to be."

At nearly every rally and appearance, Trump repeats his claims of election theft, even after his own Justice Department concluded there was

and downs. Trump elevated no widespread fraud and his campaign and allies lost dozens of court cases challenging the results.

McDaniel's role in the events between the 2020 election and the attack on the Capitol by a Trump-aligned mob on Jan. 6, 2021—as well as her past support of his false claims about the 2020 election-have long made her a target for many Democrats.

She also triggered an onair mutiny this week among NBC and MSNBC talent critical of her hiring, the latest example of how news networks wrestle with how or whether to represent the views of Trump's base supporters on the air.

Until her appearance Sunday on NBC's "Meet the Press"-when she declared Biden had won the election "fair and square"-McDaniel had always walked a fine line in relation to Trump's election denialism. She often talked about the need to resolve election-integrity issues before the 2024 election, but typically stopped short of endorsing conspiracies pushed by others.

In a July 2023 interview on CNN, McDaniel didn't acknowledge that Biden was legitimately elected when pressed. "I don't think he won

it fair," she said. "I'm saying there were lots of problems with the 2020 election, and we need to fix it going forward.'

Claims debunked

Shortly after the 2020 election, McDaniel made accusations about irregularities and purported problems with vote counting in her home state of Michigan, a battleground that helped decide the outcome. State officials debunked the claims.

She also was on a call with Trump on Nov. 17, 2020, when he pressured two Republican election officials not to certify 2020 vote totals in a key Michigan county, according to a recording of a postelection phone call that was reported by the Detroit News.

"Democrats waged war on election transparency, security and integrity undermining our elections, and we at the RNC are using every tool at our disposal to protect the vote," McDaniel said at an RNC meeting in August 2021.

McDaniel also supported an RNC resolution in 2022 calling Jan. 6 "legitimate political discourse" that cen-sured two Republican lawmakers who sat on the House select committee that investigated the attack. Polls show

Companies Fight Over Aľ Talent

Continued from Page One and perks. And the current AI talent shortage stands out for another reason: It is happening as layoffs are continuing in other areas of tech and as companies have been reallocating resources to invest more in covering the enormous cost of developing AI technology.

"There is a secular shift in what talents we're going after," said Naveen Rao, head of Generative AI at Databricks. 'We have a glut of people on one side and a shortage on the other.'

Databricks, a data storage and management startup, doesn't have a problem finding software engineers. But when it comes to candidates who have trained large language models. or LLMs, from scratch or can help solve vexing problems in AI, such as hallucinations, Rao said there might be only a couple of hundred people out there who are qualified.

Some of these hard-to-find, tier-one candidates can easily get total compensation packages of \$1 million a year or more.

Salespeople in AI are also in demand and hard to find. Selling at the beginning of a technology transition when things are changing rapidly requires a different skill set and depth of knowledge. Candidates with

those skills are making around double what an enterprise software salesperson would. But that isn't the norm for most people working in AI, Rao said. For managerial roles in AI and machine learning, base-pay increases ranged from 5% to 11% from April 2022 to April 2023, according to a WTW survey of more than 1,500 employers. The base-pay increases of nonmanagerial roles ranged from 13% to 19% during the same period.

Levels.fyi co-founder Zuhayeer Musa said the median salary for six candidates who had consulted the career-services platform about job offers from OpenAI was \$925,000 including bonus and equity. The median compensation of 344 machine learning and AI engineers at Meta who revealed their pay to Levels.fyi was nearly \$400,000 a year including bonus and equity, he said.

Scott Chetham, CEO of Faro Health, which uses AI to help pharmaceutical companies design more efficient drug trials, aims to keep salaries in the top 25% of what companies in the space pay. Through 2023, that was hard to do because of extremely high outliers, but he is now seeing signs of softening this year. "It's early, but it's not as bad as it was,' Chetham said.

Chetham's company was courting a candidate recently from one of the largest consulting firms and made her an offer. The firm countered by doubling the employee's salary. The candidate told him she was annoyed that her company only offered to double her salary when she was presented with a hours. Tolls are higher for larger vehicles, and lower for late-night entries into the city, as well as for motorcycles.

pates he will get \$40 million from the stock alone, Kinsey said. With another candidate, what sealed the deal was a verbal promise that the person could start an entirely new product line once he delivered on making the company's first chip.

The race to build chips—the hardware required to train large language models—is so intense that Kinsey has had four clients in the past year ask him to poach entire engineering teams from competitors to shave off the time it takes a new team to collaborate well together.

WORLD NEWS **U.S. Presses to Shape Rafah Operation**

Talks focus on how to shield civilians when Israel moves against Hamas in the south

BY MICHAEL R. GORDON AND VIVIAN SALAMA

WASHINGTON-In two days of meetings between the Israeli defense chief and senior officials in the White House and Pentagon, discussions on Israel's planned military operation in southern Gaza focused not on how to stop it, but on how to protect civilians during its rollout.

The businesslike tone of the talks was a departure from previous weeks, when top U.S. officials bluntly warned Israel against an all-out offensive on Rafah—where more than a million displaced Palestinians have taken refuge-while Israel's prime minister defiantly vowed to press ahead.

Rafah has been at the center of a growing rift between Israeli and U.S. political leaders. Those tensions boiled over on Monday, when Israeli Prime Minister Benjamin Netanyahu canceled a visit to Washington by top aides to discuss U.S. concerns over the planned offensive on Rafah, where Hamas fighters are making a final stand. The tit-for-tat move was in response to the U.S. abstaining from a United Nations Security Council reso-

Palestinians moved a body bag on Wednesday from a building in Rafah in southern Gaza that was destroyed in an Israeli airstrike.

lution that called for an immediate cease-fire while demanding the release of hostages.

Israeli Defense Minister Yoav Gallant, however, proceeded with his scheduled meetings at the White House and Pentagon on Monday and Tuesday. Gallant is part of Israel's three-member war cabinet that includes Netanyahu

and Benny Gantz, the prime minister's chief political rival. While President Biden's relationship with Netanyahu has frayed, the channel between Defense Secretary Lloyd Aus-

tin and Gallant remains strong. In Gallant's closed-door meetings in Washington, a more pragmatic conversation began to emerge in which the

a phased operation to reduce the potential harm to civilians, while ensuring that Israel dismantles Hamas's four battalions in Rafah. "I think there is an understanding we have to dismantle Hamas," Gallant said.

At a Tuesday meeting, Austin pressed his Israeli counterpart to ensure that arrangements

discussions were on conducting are in place to protect civilians before an operation starts. Both sides also agreed that the Hamas battalions in Rafah must be dislodged so the militants can't attempt a comeback or continue to smuggle weapons into the enclave. That means trying to find ways to work with Israel on its Rafah strategy, for lack of better options.

After negotiations in Doha. Qatar, on a temporary ceasefire stalled last weekend, Israeli officials told mediators that it could launch an operation in Rafah as soon as Ramadan ends around mid-April if efforts to reach a deal fail, Egyptian officials said on Wednesday. The talks could resume in person again in Cairo by the end of this week, the officials added.

A senior Israeli official familiar with the talks said Israel is still open to continuing talks, but would consider other options if there is no breakthrough, including launching its planned Rafah operation as soon as possible.

While a military operation isn't imminent, the challenges are monumental. About 1.4 million Palestinians are sheltering in Rafah, including many who have fled from other areas in Gaza. The city is a major entry point for humanitarian assistance and an Israeli military operation could cut civilians off from critical assistance while again uprooting them.

While Gallant and U.S. officials exchanged broad concepts of how a Rafah operation might unfold, details haven't been spelled out.

A critical question is whether U.S. officials will regard Israel's preparations-including moving Rafah's civilians out of harm's way before an operation begins and ensuring they receive humanitarian aid—as adequate.

For Attack on Ukraine

By MATTHEW LUXMOORE

Reeling from an apparent security lapse that allowed a group of heavily-armed men to massacre dozens of concertgoers near Moscow last week, Russia has gone into overdrive advancing a narrative that pins the blame on a usual suspect: Ukraine.

Western officials have said Islamic State is responsible for the March 22 attack on the Crocus City Hall concert venue that killed at least 143 people and left hundreds wounded. The group claimed responsibility through the ISIS-affiliated news agency Amaq. But Russia, embroiled in a war with Ukraine

and linked the attacks to armed raids into Russia by Kyiv-backed commandos and Ukrainian drone strikes on Russian energy infrastructure.

Neither he nor the other Russian officials gave evidence of Ukrainian complicity. Kyiv has vehemently denied any involvement in the attack. The U.S. has dismissed Russia's claim.

"Those comments by Russian officials...are just propaganda to justify their continued aggression against Ukraine," said State Department spokesman Matthew Miller.

But in recent days, senior members of Putin's government have stepped up their allegations, explicitly blaming Ukraine and now the West. On Wednesday, Russian investigators said they were probing reports that the U.S. and other Western countries were financing and helping perpetrate terrorist attacks in Russia. Analysts say the campaign to blame Ukraine is part of a push to divert attention from security failures that appear to have allowed the attackers to enter the concert hall despite a police presence in the building. 'They want to categorize this attack as part of a broader standoff with the West and Ukraine and not just a failure of the Russian security services,' said Kirill Shamiey, a fellow at the European Council of Foreign Relations. He said Russia is hedging its bets by acknowledging that radical Islamists were responsible, but avoiding the humiliation of depicting them as operating separately from the war in Ukraine.

Russia Amps Up Blame | North Korea Grows More Isolated

By Liyan Qi and Ming Li

North Korea, one of the world's most isolated countries, has walled itself off further over the past years, data and satellite images show, with devastating effects for its population.

Satellite images and trade data analyzed by Human Rights Watch document how when Covid-19 hit, North Korea sealed its borders and erected new barriers. International sanctions had cut into trade, including with China, its primary ally and trading partner. In 2020, commerce with China effectively ceased, worsening food shortages.

In analyzing satellite images of roughly one-quarter of the country's northern border, the

North Korean soldiers patrol along a riverside in Uiju County on the border with China.

and having convinced Russians that Kyiv and its Western backers are the source of its ills, quickly reverted to form.

"Islamists couldn't prepare such an action alone," Alexander Bortnikov, the head of Russia's Federal Security Service, told Russian state TV. He accused Western security services of involvement and echoed earlier comments by President Vladimir Putin that the attackers planned to flee to Ukraine where "they were supposed to be greeted as heroes."

This week's cover of Russia's biggest weekly newspaper shows portraits of Western leaders engulfed in flames with the headline: "We know the architects of the Crocus terrorist act. We hope they burn in hell."

Putin acknowledged on Monday that the attack was carried out by Islamist radicals, but hinted that Kyiv and its U.S. backers were involved

rights organization found authorities built layers of fencing in border areas that had served as trade routes, including where smugglers had brought food into North Korea and where North Koreans had escaped into China before Covid-19. Much of the terrain along North Korea's northern border, which largely follows the vast Yalu River, is so treacherous that no fencing is needed.

The new fences North Korea built since 2020 included a far-north section of its border with China, according to Human Rights Watch's analysis of North Korea's satellite images.

The areas surrounding the North Korean city of Hoeryong, separated from China's Jilin province by the Tumen River, had been a hot spot for informal trade. That was largely because an existing fence left an opening in a stream leading to the Tumen

WORLD WATCH

that had allowed North Koreans to reach crossing points when the water was low.

Since 2020, North Korea has built a bridge across the stream that closed that loophole, and added guard posts to the existing fence. The images show they also added a secondary fence farther inland.

The number of North Korean defectors eventually ending up in South Korea has dwindled since 2020 because of the fortified border with China and a "shoot-on-sight" order on North Korea's northern border. Virtually all North Korean

defectors escape via China, which has long made defectors' passage difficult. During the pandemic, China's own Covid restrictions made escapes even harder. China built its own daunting walls to fend off illegal crossings.

After Beijing reopened its

border in January 2023, the number of defectors picked up slightly, allowing some defectors stuck in China to flee to South Korea.

Economic sanctions imposed by the United Nations to force Pyongyang to abandon its nuclear ambitions had hurt North Korea's imports before Covid. During the pandemic, commerce with China slowed almost to a standstill.

Imports picked up in 2022. Chinese customs data show they improved further in 2023. Still, imports remain well below levels before the pandemic. In addition, almost all North Korea's imports are from China, suggesting a further distancing from the rest of the world.

With the sharp drop in trade, food shortages worsened as North Korea's imports of staple foods and proteins plunged. According to Human

SLOVAKIA Protesters Seek To Protect Media

Protesters in Slovakia formed a human chain around the country's public TV and radio building Wednesday in anger over a takeover plan by the government. Prime Minister Robert Fico has labeled several private media outlets his enemies.

The plan was drafted by Culture Minister Martina Šimkovičová, who represents an ultranationalist member party of the coalition government and has worked for an internet TV outlet known for spreading disinformation. The plan has been condemned by President Zuzana Čaputová, opposition parties, local and international media organizations, the European Commission and others who warn that the government would be taking full control of public broadcasting. Slovak journalists have called the plan an attack on all free media. -Associated Press Rights Watch, the regime feared imported goods would carry the Covid-19 virus.

In early 2020, North Korea halted train service with China and Russia, which had been how much of its food imports entered. Only the occasional cargo train was let in.

International sanctions had thrown a large number of North Koreans into food insecurity, defined by the U.N. as consumption insufficient to maintain an active and healthy life. Between 2020 and 2022, the portion of North Korea's population without enough food increased to 46%, in the U.N.'s estimates, from about 41% in the previous years.

Informal food trade with China, a lifeline for many North Koreans, was nearly wined out.

In August 2023, North Korea restarted air travel with China, breaking 3¹/₂ years of isolation.

GERMANY At Least 5 Die In Bus Accident

At least five people were killed Wednesday when a bus headed from Berlin to Switzerland drove off a highway in eastern Germany and flipped on its side, authorities said.

The accident occurred on the A9 highway near Leipzig at about 9:45 a.m., less than two hours after leaving Berlin. The bus en route to Zurich was operated by Flixbus.

Police spokesman Olaf Hoppe told N-tv television that there were "numerous iniured and at least five dead."

Flixbus said there were 53 passengers and two drivers on board. The cause of the accident wasn't immediately clear. Hoppe said there was no indication that any other vehicle was involved.

Police said the driver wasn't among those killed, German news agency Dpa reported. There was no immediate word on the identity of the victims. —Associated Press

its members Wednesday and triggered a rocket attack from Lebanon that killed one person in northern Israel, officials said. The strike on the village of

Hebbariye came after a day of airstrikes and rocket attacks between Israel's military and Lebanon's Hezbollah group along the border. The strike hit an office of the Islamic Emergency and Relief Corps. said the Lebanese Ambulance Association. It was one of the deadliest single attacks since violence erupted on the border.

The Israeli military said it hit a military building in Hebbariye and killed a member of Lebanon's Sunni Muslim al-Jamaa al-Islamiya, or the Islamic Group, and several other militants. It said the man was involved in attacks against Israel. -Associated Press

Drought Hampers Canada Push To Become a Hydro Superpower By Ryan Dube So that is good, even thou To Become a Hydro Superpower

About 70% of the country is suffering from abnormally dry weather conditions

BY VIPAL MONGA

The Canadian province of Quebec has big plans of becoming the "battery of the U.S. northeast" by feeding power generated from its dams and other hydro plants to millions of people in Vermont, Massachusetts and New York state. But dry conditions that have affected energy output worldwide are forcing one of the world's largest hydropower producers to cut exports.

'There wasn't enough snow or rain in the regions where we needed it," said Michael Sabia, chief executive of Hydro-Québec, the provincial utility.

Elsewhere, China, India and the U.S. in 2023 all recorded decreases in their hydro production for the same reason, contributing to a record global decline in hydropower generation, according to the International Energy Agency. Many countries resorted to fossilfuel electricity generation to make up for the hydro shortfall, which drove up carbon-dioxide emissions by 170 megatons in 2023, roughly equal to the annual emissions from 40 million gas-powered cars.

"Drought is a big concern," said Lei Xie, a researcher with the International Hydropower Association, a London-based nonprofit group. She said it is becoming more difficult for forecasters to model the extremes of climate change, and predict from year-to-year how much electricity local hydroelectric systems will generate.

Canada bet heavily on hydro as a means of cleaning up its carbon footprint; it is the third-largest hydroelectric-

in value," said Arush Sehgal.

Rivers and lakes in parts of Canada are drying up

Canada, the world's third-largest hydro producer, is struggling with a drought covering most of the country.

Drought intensity

Note: Drought as of Feb. 29. Extreme drought includes exceptional drought. Areas without drought designations are either not experiencing drought or weren't analyzed. Sources: Agriculture and Agri-Food Canada (drought); Natural Resources Canada (hydro powe Emma Brown/THE WALL STREET JOURNAL stations)

ity producer in the world. But with the climate becoming markedly drier, Canada's utilities are investing hundreds of billions of dollars to diversify their grids, in some cases leaning on power plants fueled by gas or coal to meet demand.

Hydro power from the thousands of rivers and streams that crisscross Canada normally provides about 60% of the country's electricity. Canada's resources are enormous.

The water reservoirs in Quebec alone collectively cover more than 4,600 square miles, nearly double the area of Delaware.

But drought conditions extending from the west coast to the east are so bad that rivers and lakes in parts of Canada are drying up. Provincial authorities have cut back on exports, and, in some cases, turned to backup generators.

Étienne Boucher, a professor at the University of Quebec

and the brand synonymous with fraud."

Bankman-Fried, who is set to be sentenced Thursday, was convicted on seven counts of fraud and conspiracy. Prosecutors have asked the judge to sentence him to 40 to 50 years in prison for his role in FTX's implosion, which prosecutors have called one of the largest financial

Bidders were primarily focused on attracting FTX's former customers to their own exchanges. Some hoped to become a distribution channel for digital assets that the customers might get at the end of the bankruptcy process—a strong incentive to get old FTX customers on to their own platforms. Before its collapse, FTX had more than one in Montreal, said water flows into Ouebec's reservoirs fell far below the mean levels observed between 1980 and 2000.

While one bad year shouldn't cause too much concern, the north often has periods of persistent drought, and climate change could make those periods much worse, threatening the sustainability of Quebec's hydro supply, Boucher said. 'The past is becoming less of a good analog for what is going to occur in the future," he said. The impact threatens to un-

dermine Canada's reputation as a stable provider of clean and sustainable energy, and risks derailing the nation's efforts to cut greenhouse-gas emissions.

The province of British Columbia, Canada's second-largest hydro producer, has been in a drought since the middle of 2022. Water levels in the giant reserves in the northern and southeastern regions of British Columbia have fallen because there has been less snow in the winter and less rain in the spring, forcing the province to conserve water, said a spokesman for BC Hydro, the provincial utility. Canada's largest hydro pro-

ducer, Quebec, has staked much of its economic future on its ability to deliver clean energy. The province has pitched itself to emissionsconscious battery manufacturers and mining companies as a provider of clean electricity with rates that are among the lowest in North America.

It has also been hoping to export power to U.S. states, marketing itself as a virtually unparalleled provider of abundant and reliable renewable power. The province has signed long-term contracts with Massachusetts and New York state to provide about 20 terawatt hours of power to the states, enough to provide electricity to 1.6 million homes for a year.

AND PATRICIA GARIP

SANTIAGO, Chile—Chile is seeking to attract private investors to boost lithium production, while maintaining state control over the country's most important deposits of the metal used to power electric vehicles, government officials said Wednesday.

President Gabriel Boric's government, which last year unveiled state-led plans to develop its vast lithium deposits, announced this week that in April it would launch tender for investments to produce lithium from more than two dozen salt flats. The government aims to sign contracts by the end of Boric's administration in early 2026.

Mines Minister Aurora Williams said the state would have majority control over projects in the Atacama and Maricunga salt flats, which have the nation's biggest

deposits of lithium which is contained in brines. salty Currently, Chile only produces lithium from Atacama the salt flat.

'We believe the state

through its public companies can efficiently develop lithium," Williams said in a meeting with foreign press Wednesday. The objective, she added, is to "develop projects that allow the state of Chile to capture rent that naturally will benefit the country's social demands."

stake in five other salt flats, but wouldn't hold a majority interest in projects there, Williams said. Companies will be able to invest in another 26 salt flats, without state control.

private participation than what was initially indicated,

so that is good, even though it is over a limited portion of the area," said Rony Zimerman, a mine lawyer in Santiago.

Zimerman said those salt flats are already covered with mining concessions held by companies that don't have the right to extract lithium, which requires special permits to mine in Chile because it is considered a strategic mineral. That could raise legal disputes with the new lithium investors if they are awarded a tender where there are mining rights.

"It creates uncertainty right now and may cause a source of litigation in the future if it is not addressed," he said.

Chile has the world's biggest lithium reserves but it has struggled to develop new mines because of tight regulatory control over the mineral that has prevented foreign companies from investing in the industry.

As a result, Chile, the world's second-biggest lithium pro-

The government

strategy is a

for the private

sector.

ducer. has lost market share to producer top Australia and Argentina, which has attracted Chinese, American and European miners to its lithium fields. Chile's failure

to develop new lithium mines has raised con-

cerns that the country could miss out on growing demand for the metal that is used in batteries for electric vehicles and smartphones.

The Boric administration's strategy is a "very risky bet" for the private sector, said Chilean lithium expert Daniel Jimenez. The proposal is unattractive for firms because the state will control Chile's biggest deposits, require firms to use new and largely untested technologies, and impose high taxes relative to other jurisdictions, he said. "It's a bad policy," he added.

The state would have a

There is more space for

an FTX creditor who briefly consulted for Proof Group, one of the prospective buyers. 'They had a thriving business that was the No. 2 exchange in the world, and all they had to do was turn it back on. But they failed to do so."

Former customers complain that they aren't really being made whole because they are set to get back only the cash value of their crypto as of November 2022, when FTX filed for bankruptcy. Bitcoin has more than tripled in value since then and is trading around \$70,000, near record levels. Proponents of an FTX restart said customers should

frauds in U.S. history.

To unpack what happened to FTX 2.0, the Journal interviewed bidders vying to restart the crypto exchange, creditors involved in the process and FTX's post-chapter 11 management team.

FTX began to look for buvers in May. Behind the scenes, the unsecured creditors' committee pushed for the restart. Such committees are common in bankruptcies and are intended to ensure creditors' views are represented. With FTX, the committee consisted largely of crypto firms, such as algorithmic trading firm Wintermute Asia.

million users, including "whales" who are among a crypto exchange's biggest customers, akin to high-rollers at a casino.

Bullish came to be seen as the leading contender. Farley's firm offered to pay with its own shares, offering a stake of about 15% of Bullish to be distributed to FTX customers, with a formula that increased the payout if Bullish hit certain targets. Bullish also sought to attract FTX customers by starting a market for digital tokens representing their bankruptcy claims.

Bullish's proposed deal for FTX fell apart in December. Ray's team was disappointed that the FTX 2.0 bids were largely based on slices of potential future revenue, rather than cash or other tangible assets. Ray's team also felt it would be unfair to effectively force FTX customers to sign up for a new exchange. Meanwhile, the creditors' committee came around to the view that it wasn't worth the time and expense to finalize a complex deal.

Andrew Dietderich, a lawyer for FTX, revealed that reboot efforts had stalled at a Jan. 31 court hearing.

'The costs and risks of creating a viable exchange from what Mr. Bankman-Fried left in the dumpster were simply too high," he said.

Days later, Figure CEO Mike Cagney publicly posted details of his bid on X.

He proposed to combine FTX's customer list with a new exchange that Figure planned to launch, to be partowned by FTX creditors.

The "proposal is worth \$billions to FTX creditors and establishes an owner-community day one for our exchange," he tweeted.

Ray remains unconvinced. "The fairest thing we can do is prioritize returning as much cash as we can to victims, so they can decide what to do with it themselves," he said.

get shares in a rebooted exchange to help compensate

them for that lost opportunity. FTX Chief Executive John J. Ray III, who has led FTX since it filed for bankruptcy protection, said his team led an exhaustive effort to find buvers or merger partners for the exchange-but the proposals that came in weren't

good enough. "In each case, no serious investor was willing to give us material value when weighed against costs, delays and other factors," Ray told The Wall Street Journal in a statement. "We did not even receive a meaningful bid for any intellectual property because the code was obsolete

Friction emerged between the committee and the bankruptcy estate. Some creditors privately accused Ray's team of fumbling crypto transactions and moving too slowly on FTX 2.0.

The bankruptcy estate denied having disagreements with the committee over the 2.0 process.

By September, FTX said more than 75 potential bidders had indicated interest. Three main suitors eventually emerged: Bullish, a crypto exchange led by former New York Stock Exchange President Tom Farley; fintech startup Figure; and Proof, a Valley investment Silicon firm.

Putin Holds Cards in Swap Talks

Continued from Page One captivity on Friday. Putin wanted Berlin to release Vadim Krasikov, a Russian hit man serving a life sentence in Germany for murder.

It would be a tough thing for the U.S. ally to deliver, but perhaps it could be sold to the German public if Russia agreed to free its most prominent dissident, Alexei Navalny, who was imprisoned in an Arctic gulag.

administrations Both agreed to explore the idea further.

The White House never had a chance to make a formal proposal to Moscow. Word of the discussions reached the Kremlin via a private intermediary, according to people familiar with the matter. On Feb. 16, one week after the Oval Office meeting, Navalny died suddenly of unknown causes.

"Such is life," the Russian president told reporters the night after his re-election.

It was the most shocking of a series of setbacks in secret prisoner talks between Washington and Moscow that have now bedeviled two U.S. presidencies.

America once had only one prisoner it consid-ered wrongfully jailed in Russia, the 54-year-old Whelan. But through nearly six years of intense and combative negotiations, Putin has run up the score, stockpiling his prisons with Americans to swap for the very few Russians abroad he cares to bring back.

'Butcher'

Both Presidents Biden and Trump found themselves facing the crude asymmetry between the U.S. and Russia, whose leader of a quarter-century can order foreigners plucked from their hotel rooms and sentenced to decades on spurious charges.

Putin, whom Biden called "a butcher," hasn't been a normal negotiating partner. After news of Navalny's sudden death interrupted an annual lunch among chiefs of the leading Western security agencies, several attendees immediately wondered if the Russian ruler had ordered a hit. Weeks later, the U.S. hasn't offered a public assessment of how he died, while Russia has cited only "natural causes." At the same time, America has been an easy mark, polarized by its culture wars and susceptible to the power of celebrity-driven campaigns that leveled a degree of pressure on the White House never felt by the Kremlin. The Biden administration came into office determined to craft a consistent approach to prisoner talks—only to be knocked off course by viral outrage when Russia jailed Olympic basketball champion Brittney Griner. As her representatives lobbied the president to free her, if necessary by trading notorious Russian arms dealer Viktor Bout, the Justice Department was concerned such a deal would make it harder to free Whelan and encourage Putin to grab more Americans.

German Chancellor Olaf Scholz meets with President Biden in the Oval Office in February. Below, Wall Street Journal reporter Evan Gershkovich, left, and former U.S. Marine Paul Whelan, right, made court appearances in Moscow after being charged with espionage. Both deny the charges and the U.S. State Department has declared them wrongfully detained.

Hill, who sat across the table from Russia's president as the top Russia adviser for President Trump. "He has figured out he can exploit our domestic preoccupations and anxieties.'

'I'm a Marine'

The first time the name "Paul Whelan" landed in the American Embassy in Moscow, nobody knew who he wasjust that he had been grabbed in a raid on his hotel room during the Christmas holidays

sia's central bank. Russia would be willing to trade her for Whelan. Or it could trade him for a pilot, Konstantin Yaroshenko, sentenced to 20 years for drug smuggling.

'Put a deal on the table and let's talk," said Ushakov, who would interrupt meetings to take a call from the president he called "the boss."

There was another prisoner the Kremlin wanted more: Viktor Bout, the Russian arms trafficker loosely fictionalized by Nicolas Cage in the blockbuster "Lord of War." America's Drug Enforcement Administration had busted him in Thailand in a 2008 sting operation. Russian diplomats had ritualistically invoked Bout in almost every meeting since, calling him a victim of America's over-

it outright: "There's no way we're going to agree to this," he said he told his staff.

OUNTROL STOR ALL AND THE NAMED

NIS BOOKSUP

In April 2019, the U.S. lost a card in its hand: A federal judge sentenced Butina to just 18 months in prison. Anatoly Antonov, Russia's ambassador to Washington, teased U.S. officials that the short sentence had made it easy: Rather than trade Butina, Moscow was now inclined to let her jail time run out.

In August, the score shifted again. Police in Russia arrested another former Marine,

melody the same as in Soviet times. On the prison floor, Whelan was ordered to stitch pants and coats in a sea of inmates in black uniforms huddled over sewing desks for Technoavia, Russia's industrial-clothing corporation. Food was scarce and fights were frequent in the labor camp sardonically nicknamed Fashion Colony.

Bout, meanwhile, was teaching yoga to inmates in a medium-security Illinois prison. In the mornings, he read the Journal, English beU.S. Embassy children attend, for carrying less than an ounce of medical marijuana.

On Feb. 17, Russian customs agents finally seized someone whose ordeal would resonate.

Basketball star

The authorities at Moscow's Sheremetyevo airport had installed three new color security cameras, perfectly aligned to record cinematic details as Brittney Griner, a two-time basketball Olympic gold medalist, lifted her black rucksack onto a customs table, en route to play with her offseason team UMMC Ekaterinburg. Inside were vape cartridges containing less than a gram of medically prescribed hash oil, illegal in Russia.

News of her arrest became fodder for America's gathering culture wars: a Black lesbian sports star had been imprisoned by a regime with draconian laws on LGBTQ rights. In the ensuing months, Hollywood and sports celebrities including LeBron James, Kerry Washington and Amy Schumer joined an exploding social-media campaign: #WeAreBG.

"Brittney Griner is Trapped

and Alone," read an opinion headline in the New York Times. "Where's Your Outrage?"

Russian officials realized they had leverage and floated a possible deal: Bout and Yaroshenko for Griner and Trevor Reed, the former White House Marine who had served at Camp David during Biden's vice presidency. Biden was also under pressure to free Reed: "Trevor had been willing to die for you," his father, Joey Reed, told the president during a meeting in March.

Biden approved an exchange of Yaroshenko for Reed. On April 27, 2022, the former Marine was flown to a Turkish airport. As he walked out onto the tarmac, and into

an American jet, he asked the U.S. delegation escorting him on board: "Where's Paul?"

Whelan, still sewing coats in IK-17 prison, had become the subject of a difficult moral calculus. The U.S. wanted to trade Bout for both Griner and Whelan, arguing the world's most famous gunrunner was surely worth a basketball center caught with hash oil and an obscure former Marine. Russia, watching the celebritystudded campaign to free Griner, proposed to trade both the sports star and Whelan for

False names

The unreported story of this escalating hostage crisis takes place in clandestine meetings in hotels in neutral capitals booked under false names. The Journal spoke to dozens of current or former U.S., European, Middle Eastern and Russian officials, including individuals directly involved in negotiations. It also reviewed court records and interviewed former prisoners, their families and the people who worked as their backchannel representatives.

As of today, the U.S. doesn't have any Russians in its prison system of the category the Kremlin wants in return for the Americans it has jailed. Washington has been reduced to hoping foreign governments might be willing to trade Russians they hold on espionage or murder charges.

"Putin will take more and more Americans," said Fiona

of 2018.

In the compound's safe room, combed daily for surveillance equipment. Ambassador Jon Huntsman was asking the CIA station chief the same question he'd asked other diplomatic staff: Who was this Michigan bachelor. repeatedly traveling to Moscow as a tourist on an ordinary visa?

The station chief was as befuddled as the ambassador, and replied that Whelan wasn't working for the CIA. The two contacted the White House, where officials determined he'd been set up.

Held in Moscow's infamous Lefortovo Prison, Whelan told his lawyer he'd been handed a thumbdrive by a friend, then almost immediately arrested by agents of Russia's Federal Security Service, or FSB. One of them had passed on a reassuring message: You'll be traded.

Days later, Huntsman arrived to meet him. Whelan was being kept in a complex of roughly 9-by-12-foot cells where lights were turned brighter through the night. Inmates' sole windows were a slice of translucent glass, so high above eye level that when morning broke, they could only see the gray Moscow sky.

"I'm a Marine, I'm tough," Whelan told the ambassador. "I can get through this."

Days later, Huntsman bvpassed Russia's Foreign Ministry to talk directly to Yuri Ushakov, Putin's chief foreignpolicy adviser. With a direct line to Putin, Ushakov could get things done.

Their meeting, in an office next to the Kremlin, was to the point. A Russian activist named Maria Butina had pleaded guilty two weeks before Whelan's arrest to being part of a conspiracy to influence U.S. politics by becoming involved with conservative groups including the National Rifle Association at the direction of a top official from Rusreach as a global policeman. Yaroshenko,

grabbed by the DEA in Liberia in 2010, was warns a former another American kidnapping on foreign soil, they insisted. Their com-

plaints fell flat with the Obama administration and with Trump.

Huntsman headed to the White House and pressed Trump for a quick deal. "We've got to get this done," the president said.

But Trump sounded a more skeptical tone to Russia specialists in his administration. The president and his national security team feared Putin would sense weakness if the U.S. started eagerly petitioning for Whelan's release.

The proposition of swapping Whelan for Butina or Yaroshenko never gained mo-Trading mentum. Bout sounded so lopsided that Trump's national security adviser, John Bolton, dismissed

night out with his Russian girlfriend. They had been preparing to release him when two counterintelligence officers walked into the station. Reed, who had served at Camp David when Bi-

'Putin will take

Americans,'

official.

den was vice president, found himself more and more facing a nineyear sentence for assaulting a police officer. He denied the charge and said Russian law enforcement provided no credi-

ble evidence. The State Department declared him wrongfully detained.

The next month, the House of Representatives began an impeachment inquiry into President Trump's dealings with Ukraine, removing any political room for swapping prisoners with the Kremlin. "Everything involving Russia basically became radioactive," one senior official said. In October, Huntsman, the ambassador who had championed Whelan's cause, resigned.

Days in IK-17, his new home—a maze of low-slung cell blocks wreathed in razor wire some 300 miles east of Moscow began with the Russian national anthem blaring from tinny loudspeakers, its

Russian President Vladimir Putin, right, and Nikolai Patrushev, a senior aide, in 2020.

Trevor Reed, during a drunken ing one of at least five languages he spoke—six, counting Esperanto.

Geneva summit

In 2021, America's new president met Putin in a mansion by Lake Geneva, the choreography echoing the city's famous Reagan-Gorbachev peace summit. Biden wanted a "stable and predictable relationship with Russia," and agreed to establish a backchannel to discuss prisoner exchanges.

Russian and U.S. intelligence officials arrived for the first backchannel talks at a European hotel, where a conference room had been booked to disguise its true purpose.

The interlocutor studying the Americans from across the table suggested Russia's appetite for a deal was souring. When it came to Whelan, Russia had a grim new demand: a spy for a spy. If Washington wanted Moscow to free an American convicted in a Russian court of espionage, the U.S. would have to secure the release of a Russian sentenced for an equivalent crime. And the U.S., he added, didn't have such a convict anywhere in its prison system.

There was, however, one Russian that Putin was starting to ask about: Vadim Krasikov, the former FSB officer serving a murder sentence in Germany. The two were so close the hit man had once bragged about passing time with the president at an elite military training facility: Putin, the erstwhile chief of the FSB, "shoots well," he'd told friends.

The price for Whelan, after two years in jail, was ratcheting up again.

In the weeks that followed, U.S. officials watched as police at Russian airports and elsewhere began scooping up more Americans. In August, customs officers arrested Marc Fogel, a history teacher at the Moscow high school Krasikov.

The Whelan family could feel the tide turning against them once more. "Does this mean he is going to be left behind yet again?" his sister Elizabeth had said to the Detroit News.

Justice Department officials were concerned: Trading Griner for Bout would make it harder to free Whelan, they argued, because there were no other inmates left in U.S. prisons that Russia wanted, plus it could make other countries reluctant to extradite criminals to America. The president overrode internal objections. The State Department dispatched an official to tell the Whelan family that Biden had agreed to exchange Bout to bring Griner home.

The journalist

Putin still didn't have his hit man back.

Just under two weeks after Griner's release, the Russian president delivered a video speech to the FSB, admonishing them to find more spies: "You need to significantly improve your work," he told FSB top brass assembled to celebrate Security Agency Workers' Day, a Russian holiday.

By the new year, U.S. officials had noticed an uptick in surveillance toward the few Americans still in Russia. Evan Gershkovich had been followed on reporting trips in Moscow and western Russia.

On March 29, he was on another reporting trip, waiting at a steakhouse in Yekaterinburg, when masked agents barged in.

Gershkovich was charged with espionage and jailed alone in a Lefortovo prison cell, prompting a worldwide outcry. The State Department within weeks deemed him unlawfully detained and Biden pledged to push for his freedom.

Putin now had two Americans spuriously classified as spies.

Hotels Make It Easier to Get Food Delivered

Pickup stations in lobbies allow guests to eat what they want in their rooms

otels are putting lots of thought and money into helping travelers do the simple thing they most want: get a plate of hot pad thai or chicken parm to eat in their rooms.

Call it do-it-yourself room service. Food delivery, a pandemic necessity when other food options were limited, has become one of those travel habits that didn't fade. Given that many hotel chains outside the high end don't offer traditional room service these days, the industry has had to adapt.

Hotels are teaming with mobile dining apps or developing their own app to help guests bring in outside food or order takeout from on-site restaurants. These hotels are also adding food-delivery stations in the lobby and easy ways to get your food while sitting at the pool.

The luxury Palazzo at the Venetian Resort in Las Vegas even has a dedicated lane for food-delivery drivers. And one new hotel chain is making subtle room-design changes with this in mind, including a bigger hotel room trash can for all the takeout trash.

"It is the way of the world," says Rick Huffman, chief executive officer of **HCW Development**, a real-estate company that owns 15 hotels, including the new Caesars Republic in Scottsdale, Ariz.

The 265-room hotel, the first noncasino hotel under the Caesars Entertainment banner in the U.S., offers room service through the Caesars Eats app. The food is delivered from on-site restaurants, including Luna by Giada De Laurentiis and, after-hours, from nearby restaurants. The hotel prefers when people order out after hours so it doesn't have to staff restaurants late into the night. The 30-year-old science company sales manager orders food from Uber Eats when she's on the road and brings camping utensils in case they forget the cutlery. She likes breakfast in her room while she's getting ready and a solo dinner after a long day of meetings. Recent orders: chia pudding in Virginia and barbecue in North Carolina.

"It's just easier to go in my room and chill," says Little, who is from Maryland.

A simpler alternative

Last year, **Hilton** joined with Grubhub to offer delivery to guests at Homewood Suites' 530 U.S. hotels. The extended-stay hotels offer free hot breakfast but no restaurants.

"We looked at what our guests were doing in their day-to-day life and how they were engaging in this space in our hotels," says Adam Crocini, Hilton's senior vice president and global head of food and beverage.

At Homewood Suites, the Grubhub option is plastered on room keys, in hotel elevators and a QR code in the rooms. All are aimed at taking the stress out of what to order for lunch or dinner for those who are new to the area or simply

don't want to go out, Crocini says. More than 100,000 orders have

been placed, Crocini says, with about half for local restaurants versus chains.

Crocini says Hilton plans to add **Grubhub** delivery to another chain soon and will likely feature the delivery service at its new LivSmart

Studios hotels. Hilton broke ground on the first Tempo by Hilton hotel around the time the pandemic began. So takeout trends were top of mind when it tested room features. The result: Minifridges in the room have glass windows so guests don't forget their leftovers, and there are slightly larger trash cans for those takeout containers.

"The little things almost got magnified," says Kevin Morgan, global head of Tempo by Hilton.

Don't expect to see a pitch for delivery services in a Conrad or Waldorf Astoria hotel, Hilton's pricier brands, Crocini says. Company data show that their guests tend to plan trips around restaurants.

"When they get there, they know quite well where they're going to be eating," he says.

Poolside delivery

Grubhub and its rivals don't divulge the size of the hotel delivery market. But Rob DelaCruz, vice president of campus and hospitality for Grubhub, says hotel partnerships have "accelerated dramatically."

Beyond Hilton, the company has reached recent deals with

Choice Hotels and Sonesta.

Grubhub made a big splash in the hospitality business in 2021 when it became the de facto room-service app at Resorts World Las Vegas. The sprawling casino hotel complex at the north end of the Las Vegas Strip lets guests order room service from any of its more than 40 restaurants with the Grubhub app, even mixing and matching items from restaurants as diverse as Junior's delicatessen and Aqua Seafood & Caviar. The food is delivered by hotel employees.

The offer even extends to the hotel pools. Craving something different than the nachos at the pool bar? Order from another restaurant, and it will be delivered to lockers by the pool.

Cinthia Pedroza, executive director of food and beverage for Resorts World, says breakfast and late night are the busiest time for DIY room service. Starbucks delivery is always popular. So is pizza from an outpost of Beverly Hills' Mulberry Street Pizza.

To those who can't fathom the idea of eating takeout in their room in a city with endless dining options, DelaCruz points to his

Tara Little is a big fan of dining in her room, even if the food is dropped off in the lobby instead of being wheeled into her room in a tablecloth-covered hot box.

◀ The luxury Palazzo at the Venetian Resort in Las Vegas has a dedicated valet lane for food drop-off and pickup. travels with his children. "Sometimes they want their Chipotle bowl," he says. "I don't want the Chipotle bowl. Sometimes I get outvoted."

How to Safely Watch the Solar Eclipse

By Aylin Woodward And Brian McGill

S kywatchers across North America are gearing up for a solar eclipse on April 8—a rare celestial spectacle when the moon passes between Earth and the sun, shielding the latter from view.

More than 30 million people across a roughly 115-mile-wide path will experience what scientists call totality—when the moon entirely blocks the sun. This path of totality cuts from central Mexico to Newfoundland, passing through 13 U.S. states starting in the afternoon. Most of the rest of the continent will glimpse at least a partial eclipse.

It is tempting to look up, but looking directly at any part of the sun is unsafe. That doesn't change during a partial eclipse. Even if just 1% of the sun's surface is visible, it

is still 10,000 times brighter than a full moon and viewing it without the right equipment is dangerous.

Optometrists and astronomers say eclipse gazers can safely wit-

ness the event by buying special solar viewers, such as eclipse glasses. Here's what to know.

Why it's dangerous

On a daily basis, people are hardwired to not look directly at the sun for more than a few seconds, said Dr. Ralph Chou, an optometrist and professor emeritus of optometry and vision science at the University of Waterloo in Canada.

When peeping at the sun, you ofsten feel pain before looking away. That pain is your iris tightening

- $\frac{1}{2}$ your pupil to control how much
- ëlight enters the eye. This tightening ∃signals the brain to look away and

avoid hurting the retina.

"But during an eclipse, we know there's something odd going on, and we're able to overcome the natural aversion reflex," Chou said.

Looking at a solar eclipse without the right equipment can cause what is known as eclipse blindness, or retinal burns, when the cells in the retina get damaged or destroyed and can no longer properly transmit what you see to the brain. Gauging how much damage is occurring can be difficult, as the retina has no pain receptors.

"The result is that with many people who incur an eclipse eye injury, they go about their daily business for the rest of the day and everything's fine when they go to bed and it's next

morning, when they wake up and open their eyes, that they realize they've got a spot in their vision where things are blurry," Chou said.

About 50% of people recover after several months to a year, but the rest experience changes to their vision, he said, adding that even the most extreme of these injuries don't result in total blindness.

How eclipse glasses work

Eclipse glasses consist of solar filters that block out light from the sun. The filters are at least 1,000 times darker than the darkest ordinary sunglasses, according to astronomer Rick Fienberg, project manager for the solar eclipse task force of the

Looking at an eclipse without proper protection for your eyes can cause retinal burns.

American Astronomical Society. While sunglasses block up to 90% of visible light, eclipse glasses that meet international requirements transmit no more than 0.001%.

The filters in eclipse glasses aren't made with glass but rather materials such as black polymer, composed of carbon particles suspended in flexible resin. These filters are highly effective at filtering out light from the sun and help depict it in a yellowish hue.

What to look for

Eclipse glasses need to be compliant with requirements set by the International Organization for Standardization. Compliant glasses will say they meet the ISO 12312-2 standard, which is the organization's guideline for the amount of light from the sun filters can transmit to your eye during a direct-viewing situation such as an eclipse.

But seeing the ISO standard printed on a product isn't sufficient to indicate if it is safe to use during an eclipse, because it doesn't prove the glasses have been tested properly, Fienberg and Chou said. Anyone can print that logo, but it doesn't mean the glasses comply with the standard.

Fienberg and Chou recommend people purchase eclipse glasses from a list of vendors vetted by the solar-eclipse task force. One test for glasses is to put them on and make sure nothing is visible when you walk around in-

doors. An exception is very bright lights, such as the one from your smartphone in front of your eyes.

It is also important to make sure that the glasses aren't punctured or scratched, and that the filters aren't coming loose from the frames.

When to use them

The only time when it will be safe to look directly at the sun is during totality, when the sun is fully blocked by the moon.

Don those glasses up until the moment totality begins. And once the end of totality approaches, be prepared to put your glasses back on. Totality will last no more than about 4½ minutes, depending on where you are in the path.

If you want to use

binoculars or a telescope, it is important to add a solar filter to the front end facing the sun. Unfiltered telescopes, binoculars and cameras, even with eclipse glasses on, concentrate a lot of light into your eyes and cause injury, according to the National Aeronautics and Space Administration.

Totality ends when the first bright flash of light comes out on the edge of the sun's eclipsed disc, appearing like a diamond ring in the sky, Chou said.

"Even that one little bead of bright sunlight is too bright," Fienberg said, "so look through those unfiltered optics only at the beginning of totality."

What to Know About Charging EVs at Home—and Saving Money

High-voltage outlets, smart chargers and utility company rebates can help reduce expenses

THINGS I MISS about my local gas station:

That's it. That's the list. OK, fine, I did enjoy the communal squeegees.

This week marks six months since the grand opening of my home electric-vehicle charging station. Congrats to the whole team! (Me and my electrician.) Located between my garage door and recycling bin, it's hard to beat for the convenience. And also the price.

If you've followed my ad-EVntures, you're aware of my feelings about the hell that is public EV charging, at least before **Tesla** twice as much—assuming gas held steady at around \$3.25 a gallon. And I was charging through the winter, when electricity doesn't stretch as far in an EV.

Rebates and programs from my state and utility company sweeten the deal. So I will be able to take advantage of discounted electricity, and offset the cost of my charger. The same may be available to you.

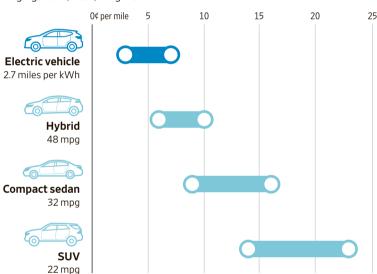

But first, there are technical things to figure out. A 240-volt plug? Kilowatt-hours? Peak and off-peak charging? While other people are in their garages founding world-altering tech companies or hit rock bands, I'm in there finding answers to your homecharging questions.

How to get set up

Sure, you can plug your car into a regular 120-volt wall outlet. (Some cars come with a cable.) And sure, you can also simultaneously watch all of Netflix while it charges. It would take more than two days to fill my **Ford** Mustang Mach-E's 290-mile battery via standard plug, known as Level 1 charging.

Fill 'Er Up

The cost per mile of Joanna's Mustang Mach-E AWD EV—charged at home in New Jersey—vs. popular gas-powered options with gas prices ranging from \$3 to \$5 a gallon

Sources: Department of Energy/fueleconomy.gov (fuel economy); PSE&G (New Jersey energy prices);

Tom Moloughney, the biggest EVcharging nerd I know. On his website and "State of Charge" You-Tube channel, Moloughney has reviewed more than 100 home chargers. In addition to technical measurements, he does things like freezing the cords, to see if they can withstand wintry conditions.

"Imagine you are fighting with this frozen garden hose every time you want to charge," he said.

One of his top picks, the ChargePoint Home Flex, was the same one my dad had bought. So I shelled out about \$550 for it.

Just remember, if you want to make use of a charger's advanced features—remote controls, charging updates, etc.—you'll also need strong Wi-Fi in your garage.

How to save money

I hear all you money-minded WSJ readers: That's at least \$1,600 *af-ter* getting the car. How is this saving money? I assumed I'd recoup the charging-equipment investment over time, but then I found ways to get cash back even sooner.

My utility provider, PSE&G, says it will cover up to \$1,500 on eligible home-charger installation costs. I just need to submit some paperwork for the rebate. In addition, New Jersey offers a \$250 rebate on eligible charger purchases. (Phew! My ChargePoint is on the list.) If all is approved, I'll get back around \$1,250. Fingers crossed!

I didn't know about these programs until I started my reporting. Nearly half of home-charging EV owners say they, too, are unaware of the programs offered by their electric utility, according to a 2024 study released by J.D. Power. It's good to check with your provider.

How to charge

Now I just plug in, right? Kinda. Even if you have a Level 2 charger, factors affect how many hours a fill-up will take, from the amperage in the wall to the current charge of your battery. Take Lionel Richie's advice and plan on charging all night long.

It can also save you money to charge during off-peak hours.

Electricity costs are measured in kilowatt-hours. On my basic residential plan, PSE&G charges 18 cents per kWh—just 2 cents above the 2023 national average. My Mustang Mach-E's 290-mile extended-range battery holds 91 kilowatt-hours.

Translation: A "full tank" costs \$16. For most gas-powered cars, that wouldn't cover half a tank.

And if I'm approved for PSE&G's residential smart-charging plan, my off-peak charging (10 p.m. to 6 a.m. and weekends) will be discounted by up to 10.5 cents/kWh that I'll get as a credit the following month. I can set specific charging times in the ChargePoint app.

Electricity prices fluctuate state to state but every expert I

started sharing its Superchargers with its rivals. Truth is, I rarely go to those public spots. The vast majority of EV owners—83% regularly charge at home, according to data-analytics company **J.D. Power**.

I already discovered many EV virtues, but I didn't quite grasp the cost savings until I tallied up half a year of home-charging data. In that time, I spent roughly \$125 on electricity to drive just under 2,500 miles. In my old car, that would have cost me more than That's why you want Level 2, which can charge you up overnight. It requires two components:

► A 240-volt electric outlet. Good news: You might already have one of these higher-powered outlets in your house. Some laundry dryers and other appliances require them. Bad news: It might not be in your garage—assuming you AAA (U.S. gasoline prices)

even have a garage.

Since my suburban New Jersey home has an attached garage, the install process wasn't horrible or at least that's what my electrician said. He ran a wire from the breaker panel in the basement to the garage and installed a new box with a NEMA 14-50 outlet. People with older homes or detached garages might face trickier wiring issues. My installation cost about \$1,000 but the pricing can vary.

► A smart charger. Choosing a wall charger for your car is *not* like choosing one for your phone. These mini computers help you control when to start and stop charging, calculate pricing and more.

"This is not something where you just go to Amazon and sort for lowest to highest price," said spoke to said no matter where in the country you live, home charging should cost less than half what gas would for the same mileage. And as I've previously explained, fast charging at public stations will cost much more.

One big question: Am I actually of the environment if I'm just taxing the grid? Eventually, I'd like to offset the grid dependence—and cost—by powering my fancy little station with solar panels. Then, I'll just be missing the squeegee.

A Debate Over Hot Cross Buns

Continued from Page One

package, and warmed them up on a sandwich press. She said it tasted like a grilled cheese, but the pizza flavoring didn't really come through. She didn't have another. "It was more of a bread roll that they've just called a hot cross bun," said Davidson, a 32-year-old nurse. "I don't know what makes it a hot cross bun. Maybe the fact that they've just put the cross on the top."

The hot cross bun, historically made with fruit and spice, is getting a makeover in Australia—with buncrazed bakeries and supermarkets trying to grab the spotlight with increasingly eccentric Easter creations. (Sauerkraut in your hot cross bun, anyone?)

But not everyone wants to do away with centuries of tradition.

"We taste-tested novelty hot cross buns so you don't have to," blared one headline in the Sydney Morning Herald. "What better way to celebrate the resurrection of Jesus Christ than with a special-edition novelty foodstuff?" chided another reviewer in the Weekend Australian Magazine, concluding the pizza buns were "bloody awful."

"Savory is a bit weird," said

Adam Moore, 47, a culinary judge and chef. "It just feels like I should be eating something sweet."

Bun varieties now being bandied about in Australia range from super sweet to downright meaty. One hot cross bun has raspberry fudge, jellies, white chocolate and a sprinkle of coconut, and is based on a popular treat called an Iced VoVo.

Humble Bakery in Sydney is offering what it calls a Hot Cross Reu-Bun—a fruitless version filled with pastrami, horseradish cream, sauerkraut, pickles and Dijon mustard.

The origins of hot cross buns aren't entirely clear, some scholars say. One theory suggests medieval monks marked them with the cross at Easter as a nod to the holiday's religious significance. Many cultures use dried fruit and sweeteners in bread to mark important occasions.

The novelty buns have their fans. Helen Garkinis liked the Iced VoVo buns so much that at one point she had about 50 buns stashed in her freezer, with plans to share them with family. The raspberry cuts the sweetness, she said, and goes well with the white chocolate. "When I first heard they were released, I was like a bit of a crazy person," said Garkinis, 50, who went to six stores looking for them.

One of the biggest challenges was emulating the texture of crackers and biscuits in the form of a bun, said Thea Comino, a bakery-product developer at Coles, the grocery chain selling the pizza-flavored and Iced VoVo buns. For the pizza bun, based on a popular pizza-flavored

cracker, soy grits were used atop the bun. Tomato granules were baked throughout the dough. "We knew it was going to generate some hype and interest," she said. "But never did I think it would be this big."

Special-edition buns are already sold out in some stores. Coles and Woolworths, Australia's other main supermarket chain, expect to sell a combined 30 million buns the week of Easter—enough for each person in this country of about 27 million to have a bun, plus a bite.

St. Stephen's, an Anglican church in a Sydney suburb, is advertising that hot cross buns will be available at one of its Good Friday services likely the traditional ones, as well as

▲ Freshly made hot cross buns, infused with yuzu.

a fruitless version.

Senior minister Prash Colombage isn't too bothered by the zany buns, as long as they have crosses on them. In fact, as a kid, Colombage said he didn't like the dried fruit and would try to pick them out of the buns. "If someone wants to provide us with their own stash of savory ones, we'll happily serve savory too," he said.

Other buns sold in Australia include some made with cheese and Vegemite—the yeasty spread that is a local favorite. There are buns filled with Biscoff biscuit spread, and buns made with chips of Cadbury Caramilk, which is a blend of caramelized white chocolate. A "sticky date" hot cross bun has dates and caramel fudge.

"It's tough out there, it really is, cause everyone's doing really cool buns," said Eddie Stewart, who co-owns Tokyo Lamington, a Japanese-Australian fusion bakery, with shops in Sydney and Melbourne.

One of his offerings this year is a hot cross bun infused with yuzu, an Asian citrus. Key to the recipe: soaking raisins in imported yuzu juice for three months with bits of candied

lemon and orange zest.

The raisins are mixed in a cinnamon-bun dough—but bakers have to be careful not to smash the raisins because they are so full of juice. Once baked, the buns are brushed with a glaze made from caramelized sugar and yuzu juice. "They're not like super, super yuzu in your face," said Stewart, 38. "You more get

Stewart said he experimented with a bun with chocolate and miso, the fermented bean paste used often in Japanese cuisine. He said it tasted good with dark chocolate, but decided to hold off on selling that one for now. "The miso bun," he said, "was a bit more risqué."

ARTS IN REVIEW

BY ERIC GIBSON

ichard Serra, who died on Tuesday, age 85, was the greatest sculptor of his generation and one of the greatest

in the history of American art. Born in 1938 and the recipient of an MFA in 1964 from the Yale School of Art (where he studied under Josef Albers), he was best known for enormous outdoor works that he began making in the 1980s consisting of precariously angled steel walls set on one edge that snaked insouciantly across the landscape. When a wall curved in on itself, or when

two or more were set side by side, spaces were created that, when entered, were alternately terrifying and exhilarating, as the monumental steel planes pressed in one moment and in the next expanded.

Coming after the Pop artists, who made sport with American consumer culture, the artists of Mr. Serra's generation re-

turned to a hardheaded modernism, asking what E art could be and what ≧ new directions it could move into, and answering those questions by experimenting with new mategrials and processes. In

APPRECIATION A Monumental Sculptor

Richard Serra created metal artwork that was accessible and exhilarating

moving sculpture off the pedestal to interact with the full space of the gallery or museum.

But Mr. Serra's most potent "material" was an invisible one gravity. In the 1960s he began making what he called Prop pieces, sculptures such as "One Ton Prop (House of Cards)." Composed of lead or steel elements leaning into or balanced on one another, they are held together only by the weight of the parts and the equilibrium of opposing forces among them. In this way process was rendered transparent and sculpture's innate properties of weight, mass and monumental-

ity were made manifest, becoming the "subject" of Mr. Serra's art.

The effect of these Prop pieces was, and remains, electric (though unfortunately somewhat muted today by many museums' practice of roping them off for liability reasons). They made constructed sculpture stretching all the way back to Picasso, where the parts were welded together, look timid or passé. And, particularly in those works that were scaled up so the viewer could enter them, the feeling of precariousness and even threat they engendered dramatically engaged the viewer in a visceral, full-body experience unlike anything to be found in the prior history of the art form.

An often overlooked fact about Mr. Serra's art is that for all its materiality and what-you-see-iswhat-you-get character, its effects often depend on old-fashioned illusionism. "House of Cards" may look light and insubstantial, yet it's anything but. And illusionism is central to his drawings. In the main these consist of mural-size sheets of paper covered edge to

'One Ton Prop (House of Cards)' (1969, refabricated 1986), above left; Richard Serra, above.

to communicate the same sense of mass, weight and spatial displacement as his sculptures.

He put himself through college working in steel plants, but the roots of Mr. Serra's sensibility lay, as he wrote in a 1988 text, in a childhood visit to the shipyard where his father worked, to watch a launch. "When we arrived, the black, blue and orange steel-plated tanker was in way, balanced up on its perch. It was disproportionately horizontal and to a four-year-old was as large as a skyscraper on its side," he wrote. Then, "freed from its stays, the logs rolling, the ship slid off its cradle with an ever-increasing motion. It was a moment of tremendous anxiety as the oiler enroute rattled, swayed, tipped, and bounced into the sea, half-submerged, to then raise and lift itself and find its balance. . . . The ship went through a transformation from an enormous obdurate weight to a buoyant structure, free, afloat and adrift. My awe and wonder of that moment remained."

Mr. Serra's sculptures in museums and parks routinely attract scores of contented onlookers, meaning he managed that rare feat of making work that was uncompromisingly true to his modernist principles yet accessible to the lay public. But perhaps his greatest achievement is to have created a body of work that is in equal measure both profoundly original and exciting.

Mr. Serra's case this emeant making sculpture using vulcanized rubber or neon, and splashing amolten lead into the corner formed at the meeting point of a wall and $\stackrel{\boxtimes}{\cong}$ the floor. It also meant

edge in black paintstick, a type of solid paint in stick form, and shaped and positioned on the wall

'Inside Out' (2013), a snaking steel sculpture by Mr. Serra, who died on Tuesday at age 85.

Mr. Gibson is the Journal's Arts in Review editor.

ARCHITECTURE REVIEW

Buildings That **Prioritize Plants**

The structures

highlight the

beauty of the

BY MICHAEL J. LEWIS

Sarasota, Fla. garden differs from nature in only one respect: It has a boundary. It is pleasing to learn that the word "garden" itself derives from an ancient Indo-European root meaning "to enclose," giving rise to such distantly related words as "yard" and "girdle." And so to girdle a garden, so to speak, and give it a boundary is one of the most ancient of human pursuits.

Now it is pursued again at the Marie Selby Botanical

Gardens, and in the most sophisticated and technologically innovative way imag-

inable. Happily, it has been done in a way that does full justice to the primal nature of a garden.

Upon her death in 1971 Marie Selby, a philanthropist sup-

ported by a great oil fortune, left her Sarasota estate to be developed as a public botanical garden. It grew over time, adding greenhouses and service buildings, and incorporating adjoining properties, to reach its present 15-acre size. (It has an additional 30-acre campus ₄ at nearby Spanish Point.) As a gar-≸den, it is surpassingly lovely, but having grown incrementally, by fits and starts, it had no distinct archi-

tectural character. That it now does is the achievement of Overland Partners, a firm of architects based in Texas, working in collaboration with OLIN, the prominent landscape architects.

Their \$51.6 million project has given the Selby nearly 190,000 square feet of new construction, comprising a visitors center, laboratory building and parking garage, each remarkable in its own way. While buildings and parking had previously sprawled across the site, they have now been concentrated

at the north end so that one passes quickly from architec-

ture to nature. The Selby presides over the world's interconnected most extensive collection of living epiphytes, "air plants" natural world. as they are commonly known. These are plants that grow

> on other plants without hurting them, and they include some of the most spectacular orchids. They are the great glory of the Selby, and at the reconfigured entrance they are brought into view as soon as possible.

> Botanical gardens are usually fenced off from the public, but Bob Shemwell of Overland told me he wanted "a sense of transparency" at the threshold, rather than funneling visitors through a controlled

checkpoint. And so you enter under a broad spreading canopy, inspired by those of coastal trees. To the right is the visitors center and to the left the laboratory, with an open passage between them. No turnstile confronts you, and if you do happen to slip through, you are gently asked if you forgot to put on vour sticker.

The architecture of the buildings is pleasantly understated, simple alabaster-colored volumes made of coquina, the local limestone made of fossilized shells. Thus the theme of life at the water's edge is sounded at the start of the Selby experience (quite literally, as you hear splashing water as you pass beneath the canopy).

The natural world makes itself felt even in the scientific laboratory. Here the central stairwell is framed in long slivers of mahogany,

▲ Exterior view of the newly renovated Marie Selby Botanical Gardens.

cut from a single tree, while the wooden conference-room table at which the Selby's botanists gather proudly flaunts its live edges. These spaces are not generally open to the public, but you can (and should) inspect them on group tours.

A visit to the Selby begins and ends at the Living Energy Access Facility (LEAF), a portentous name for a parking garage but one that is amply justified. It is a multipurpose building with a rooftop garden that supplies the vegetables for its restaurant below. Its array of solar cells powers not only the restaurant but the entire new complex, laboratory and all, making the Selby "the first net-positive energy botanical complex in the world." Besides pro-

ducing energy and vegetables, the building also stores rainwater for the restaurant and returns excess water, after filtering, to the Sarasota Bay. All this in a parking garage that is practically invisible beneath its green curtain of growing plants.

The casual visitor need not know any of this but will still sense the spirit of quiet purposefulness that underlies it all. Having strolled among the banyan trees and bamboo, and been dazzled by the elusive Osa pulchra, you make your way back to the building where you can eat a meal formed out of the same earth, water and air of the site.

There is hardly a more pleasant way of learning the essential interconnectedness of things.

Here for once is an institution that is in absolute harmony with the buildings it has made, both in function and image. There are no false claims, no wishful thinking, no curdling insecurity. It seems wrong to speak of its architecture as something separate from the garden itself. When I committed the faux-pas of pressing the architects to name the style of the buildings, they did so with obvious reluctance. Call it "environmental modernism with a nod to the Sarasota School," they saidthen quickly added, with becoming modesty, better to think of the buildings as "an armature for plants."

Mr. Lewis teaches architectural history at Williams and reviews architecture for the Journal.

SPORTS

Before Caitlin Clark Became a Legend

In grade school, the Iowa star played in a basketball league with boys who were awed by her skill

BY RACHEL BACHMAN AND JARED DIAMOND

ake Auer was chatting with the woman beside him on a recent flight to Mexico when she learned he was from Iowa. "So, do you know Caitlin Clark?" she asked.

As it happens, he did. In fact, Auer had played against Clark in elementary school. And it was terrifying.

Long before Clark was a legendary player for the University of Iowa, leading the No. 1-seeded Hawkeyes into this weekend's NCAA tournament Sweet 16, she was a young girl honing her burgeoning skill. When Clark's father couldn't find a suitable girls program for her, he signed her up for a boys' league at SportsPlex West in Waukee, a suburb of Des Moines.

Clark immediately stood outand not just because she was the only girl in the league. She was

also the best player on her team. The boys who shared the court with her from around kindergarten to third grade saw her as a fiery, longshooting curiosity. Those boys, now in their early 20s, see traces of that girl in the woman who grew up to be the most fearsome scorer in NCAA history.

"We were always scared to play against her, for sure," said Auer, who now plays Division II basketball himself. "Our game plan was pretty much just to double-team her and get the ball out of her hands."

Payton Sandfort, the leading scorer on Iowa's

men's basketball team this season, recalled being "devastated" after a loss to Clark's squad in the semifinals of a tournament in first or second grade.

"I was like, 'Oh my gosh,'" Sandfort said recently. "'Is this what all girls are like?'"

On the opposite side of those

games, Clark's teammates learned that she was often the key to victory

'I really remember my role on the team was just to get a rebound and try to find Caitlin," said Adam Brauch, now a junior at Iowa's business school. "There was just a consensus among the guys that the best way we were going to put up any points was just to get her the ball.

Clark was as intense then as she is now. She often cried when her team lost. She was the best dribbler on the team and one of the fastest runners. She would grab the ball and sprint past hapless de-

Long before Caitlin Clark became a college star for lowa, she played in a basketball league with boys..

fenders for layups.

She could shoot, too, draining from a longer range than any of the boys around her. It was an early glimpse of present-day Clark, who is famous for pulling up from comically long distances and swishing shots.

If Clark had a flaw, it was her passing—mostly because she didn't see the point of it.

"She was just so much better than all of us that she'd get into that mode where she's like, 'I can just score every point, so I'm going to do that," said Sterling Short, a senior at Grand Canyon University.

When she drove from coast to coast a couple of times in a game, Clark's father, Brent, would remind her that she had teammates, yelling, "Caitlin, pass the ball!" Clark would stop mid-drive and fire off a pass.

There was just one problem, said Dan Keough, a longtime neighbor of the Clark family and one of the team's parent organizers. Clark would throw the ball so hard that the player on the receiving end would often fumble it. Then she would turn to her dad and throw up her hands with a look of exasperation.

Even SportsPlex West's employees saw greatness in Clark. Evan Romanchuk was taking basketball scores and refereeing games when Clark was around 10 years old and playing against teams a year older.

"She'd be crossing up boys, shooting 18-footers like it was nothing," he said.

Not everyone was impressed. One night when Clark was pouring it on against another struggling team of boys, Romanchuk said, the mother of one of them marched to the front desk to complain. It was crushing the boys' self-esteem to be shown up by a girl.

"She started screaming at us and said it was demoralizing to her son and the other players on the other team," Romanchuk said. "Our argument was, we were going to allow her to play because, you know, she's good enough to play at that level."

By middle school, Clark had moved on from the boys' league to play with other girls on an elite travel team. But the teammates she left behind kept following her journey.

During his freshman season on the Valparaiso baseball team, Brauch said, his teammates teased him for watching Clark's games on bus rides. By his sophomore year, the teasing had stopped. Now, Brauch's connection to Clark is a badge of honor. "I'm getting texts from my bud-

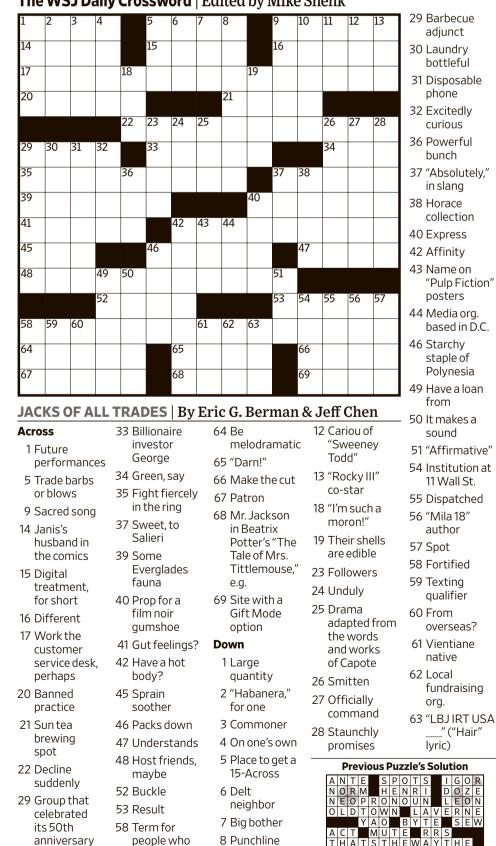

dies saying, 'I just want you to confirm that you know this girl, that you're good friends with her, that you have her number,'" Brauch said. "My friends at Valpo use it as a flex to their friends."

A Gatorade commercial released \ge last year includes scenes from Clark's days in the Waukee boys' league. One photo shows Clark standing between two of her teammates, Brauch and Michael Keough, Dan Keough's son.

Last month, on the night Clark broke the all-time NCAA women's scoring record, Brauch thought back on that photo. So he texted Keough.

"I was like, 'Dude, this picture is 🗟 probably going to be following us," Brauch said. "This is going to be in State in 2040." some U.S. history book in 2040."

Ukraine's Georgiy Sudakov, left, and Mykhailo Mudryk celebrate during a win over Iceland.

Ukraine's Soccer Team Books Place in the Euro Championship

By Joshua Robinson

THE QUESTION OF PRECISELY

where Ukraine's national soccer team would play next has been a source of constant mystery ever since Russian forces launched their invasion of the country in early 2022.

Unable to host games at home, Ukraine spent two years bouncing around its neighbors. It relied on local hospitality and temporary homes in Germany, Slovakia, the Czech Republic, and three different Polish cities.

But now, Ukraine can at least be sure where it will head this summer. The national team on Tuesday night booked its ticket to the European Championship in Germany with a 2-1 victory over Iceland that instantly turned it into the tournament's most popular Cinderella.

"The missiles are flying every day," coach Serhiy Rebrov said before the game in Wroclaw, Poland. "Our mission is to show that we're all alive and fighting against the Russians and that we need Europe's support."

The victory, sealed with an 84th-minute goal by Chelsea forward Mykhailo Mudryk, came at a time of renewed bombing campaigns by Russia. Last weekend, Ukrainian officials said that Kviv and the western city of Lviv had come under a massive airstrike by more than four dozen Russian drones and cruise missiles.

Throughout the war. the soccer team has remained a powerful symbol of Ukrainian pride. Players freely turn everv match into emotional displays of patriotism. This. they say, is their megaphone to remind the world of what their country is facing.

'Thank you, guys! Thank you, team! For [such] emotions for the entire country," Ukrainian president Volodymyr Zelensky posted on X. "For the important victory and making it to Euro. For proving once again: whenever Ukrainians face difficulties but do not give up and continue to fight, Ukrainians certainly win.

Two years ago, Ukraine narrowly missed out on a spot in the 2022 World Cup by losing a playoff match to Wales.

On Tuesday, the team seemed bound for the same fate when it fell behind to a

first-half strike from Iceland. But Ukraine, ranked No. 24 in the world, rallied with goals in the 54th and 84th minutes to reach its first major tournament since the invasion.

The only disappointment was that Ukraine couldn't pull this off in front of its home fans, settling instead for a historic victory some 300 miles from the border.

The national team hasn't played an official match on home soil since November 2021 in Odesa. And the situation has become painfully familiar to around half the players on the squad who are employed by Ukrainian clubs. Though technically based in cities such as Kyiv and Donetsk, they have had to establish temporary bases in Poland and Romania for matches in European competition, due to the danger for visiting teams.

No matter where they play, the Ukrainians view believe that they are doing much more than simply attempting to win soccer matches.

"Making the Euros," mid- 👹 fielder Volodymyr Brazhko said, "will help the world to not forget about Ukraine."

OPINION

America at Risk

WONDER LAND By Daniel Henninger

State, with some 130 killed, was an intelligence failure.

by

Hamas's Oct. 7 rampage, pitching Israel into a war of survival, was an intelligence failure.

Sept. 11 was an infamous intelligence failure.

The first two events sit starkly before the world. But 9/11 no longer does.

With its nearly 3,000 American deaths, "9/11" became shorthand for an attack that happened more than 22 years ago, in 2001. For most of the people we call "younger voters," the event called 9/11 is a wholly historical event, not one they experienced.

Biden and Trump know the details of the threat. Does either have a plan?

It seems reasonable to ask: Will the U.S. wait for another 9/11 attack before doing what is necessary to avoid or deter it? The unhappy answer is that because U.S. politics has turned inward and memories are short, America likely will be unprepared for another internal catastrophe.

The 9/11 Commission's examination of the attack's causes found that insular U.S. security agencies were poor at sharing relevant information. In its conclusion, the failed to block a cease-fire res-

The World Trade Center's twin towers on Sept. 11, 2001.

ently configured, the national security institutions of the U.S. government are still the Houthi tribe has fired drones institutions constructed to win the Cold War. The United States confronts a very different world today. Instead of facing a few very dangerous adversaries, the United States confronts a number of less visible challenges that surpass the boundaries of traditional nation-states and call for quick, imaginative, and agile

responses." Can anyone seriously say we are prepared for today's challenges, which include everything noted in that 9/11 Commission warning?

We are in a cold war with four traditional nation-states-China, Russia, Iran and North Korea. Simultaneously the world-which alas includes the U.S. mainland—is beset almost weekly by "challenges that surpass the boundaries of traditional nation-states.'

Islamic State is on the move again, after regrouping in Taliban-controlled Afghanistan.

Hamas-which like ISIS adopted the tactic of posting its bloodthirsty attacks for viewing on the internet-may yet succeed, as the sitting U.S. president bends beneath pressure from anti-Israel voters in the Democratic Party. Israel this week canceled a visit to Washington after the U.S.

commission said: "As pres- olution in the United Nations Security Council.

Since November, Yemen's and missiles, supplied by Iran, at U.S. naval vessels and commercial ships in the Red Sea, disrupting global trade.

Niger's government has formally ended an important but deteriorating military agreement with the U.S.

Closer to home, the U.S. government reports that members of the Venezuelan gang Tren de Aragua are coming into the country across the southern border. One might argue that the "border" is polling high in national concerns not merely because of the migrant flow but because

systems.

The 9/11 Commission said we have to be quick, imaginative and agile. I would add one ald Trump was. Both know the more requirement: We need to be willing. Unless the U.S. is willing to make the political and military commitments necessary to counterbalance these

multiple threats, we could get hit. An underappreciated but emerging reality: American citizens are in the strike zone everywhere—Israel, Haiti, Russia, China, Mexico.

Amid this global chaos, the U.S. political system has thrown up a 2024 presidential election pitting the hesitant, hobbled Joe Biden against an 🛿 indeterminate, variable Donald Trump. The Security Council's

cease-fire resolution, with its **Biden-ordered** abstention. didn't demand that Hamas release its hostages, including U.S. citizens. At the same time, Trump allies in Congress are holding up passage of military aid for Ukraine. In both instances, the message of irresolution to our enemies puts us at risk.

From the Middle East to Eastern Europe to the southern U.S. border, the world is filling with "little green men," proxies affiliated with the four nationstates committed to winning a cold war against the world's democracies. Two countries on that battlefield—Israel and Ukraine—are fighting and dying for the rest of us.

It's hard to blame those in the U.S. electorate who say they don't want to hear it. That we have problems at home, we're tired of endless wars. If only they were tired of endless wars. They're just getting ment is dangerously down. Theirs is dangerously up.

All roads lead back to the U.S. presidential race. Mr. Biden is running around the country raising money, and Mr. Trump is sitting in courtrooms spending it.

Joe Biden is president, Dondetails of the current threat. America's voters deserve to know what each is going to do about it.

Haunted By the Past

Ghost Dogs

By Andre Dubus III Norton, 288 pages, \$28.99

here are two things that are difficult to accept in Andre Dubus III's striking book, "Ghost Dogs: On Killers and Kin." One is his rejection of "the notion that it was my childhood alone that formed me into a hard tablet." The other is that, although he admits to having "many of the psychological symptoms of posttraumatic stress disorder," he stops short of copping to the disorder itself.

The story the author tells in this collection of essaysabout the violent and self-destructive path he was on for many years, and how writing has helped him leave it behind-belies these statements. Then again, what else would you expect from "the son of a single mother in poverty in half-dead mill towns where I had had a violent youth," ultimately becoming someone who sleeps with a baseball bat by his bed, "waiting for any rolling crunch of tires out in our gravel driveway to be a carload of men come to beat me to death"? He still sleeps with a baseball bat, we are told, and he still struggles to be the man he

wants to be.

The above quibbles aside, this may be the best book you'll read in years.

Mr. Dubus is the author of eight other books, including the bestsellers "House of Sand and Fog" and "Townie: A Memoir." He is a writer's writer of a very specific kind. His style is simple, direct and artless. "Our dog seems to know that he's nearing the end," is the first sentence of the title essay. "The summer I turned seventeen, I nearly killed my younger brother with a 12-

gauge shotgun," begins another. The man knows how to write a lead. But throughout the book he avoids clever phrases and quotable metaphors as if such things were character flaws, the fallback of writers who don't trust their material. Mr. Dubus knows better. The rare arresting image—such as the Statue of Liberty, which the author describes as having "her arm raised in the air as if she'd like to make just one important point if only someone would listen"—is the exception that proves the rule.

What the author does instead is pull you along as he grapples with the themes that have always occupied great writers-what he most fears, what secrets about himself he least wants to share and wouldn't, except that the failure to live up to our own standards is at the very heart of what it means to be human. He knows, for example, that it's not his onetime girlfriend's fault that she comes from a wealthy, loving family. It's just that his resentment, fueled by "the superior pain of the inferior, the pride of the sufferer, the shame of the poor," is more than he can bear.

In "If I Owned a Gun" he recounts his many close calls with firearms. Aside from almost killing his younger brother, he was nearly shot by his father as the man installed a trigger lock on a loaded pistol. Mr. Dubus knows all too well the siren call of firearms, how "guns, especially loaded ones, call us to use them." He writes of how the presence of a .22 rifle, illegal and loaded, in his New York apartment makes him feel "safer but also somehow more imperiled." It blinds him to more levelheaded

of U.S. overdose deaths from fentanyl made by Mexican cartels, which are amassing millions to buy weapons and political protection.

party's nomination. He led ing Sen. Joe Manchin. Demo-Rep. David Trone 49% to 37% and Prince George's County **Executive Angela Alsobrooks** 50% to 36%

Mr. Hogan is as strong as garlic in a deep-blue state because as governor he cut taxes, fees and tolls each of his eight years, while improving education and helping the state recover from Baltimore's violent 2015 riots. Voters see him as independent and authentic. giving him a great shot to become the first Maryland Republican elected to the Senate since 1980.

The Marvland poll is only the latest bad turn for Senate Democrats. They hold a 51-49 majority, and 23 Democratic Senate seats are up this year, counting those of independents Bernie Sanders and Angus King. With Republicans deonly 11 seats, fending Democrats have no room for error.

Most GOP seats up this year are in deep-red states. Only two Republicans could have

crats hold two other seats in

Opportunities abound for Republicans, who are defending only 11 seats this November.

states Donald Trump won in the last two presidential elections: Montana (which Mr. Trump carried by 16 points in 2024) and Ohio (8 points). Flipping them, too, would result in a 52-48 GOP Senate.

In Montana. Democrats are trashing Sen. Jon Tester's opponent, Tim Sheehy, a decorated Navy SEAL turned entrepreneur. They have spent as much as \$1 million some weeks during their several-monthslong television assault. Still, a March 2 poll showed Mr. Tester ahead only 44% to 42%. That isn't encouraging news for three-term incumbent.

In Ohio, PACs supporting real contests-Ted Cruz of three-term Democratic incum- profiles to do that.

March 13 poll showed Mr. Mc-Cormick only slightly trailing. 41% to 45%. In Wisconsin, developer and banker Eric Hovde posts up against incumbent Tammy Baldwin. A March 18 survey has him down 42% to 45%. The gap was 8 points three weeks earlier, before Mr. Hovde announced. For Michigan's open seat, the likely GOP nominee is former House Intelligence Chairman Mike Rogers. The ex-FBI agent will face Democratic Rep. Elissa Slotkin, once a CIA analyst. A March 18 poll pegs the race at 39% for Mr. Rogers, 41% for Ms. Slotkin.

Since all three states are presidential battlegrounds, they'll be close. With Democratic money driving turnout against Mr. Trump, the GOP candidate must hold the Trump vote while winning suburbanites who would support down-ballot Republicans but not Mr. Trump. These three Republicans have the

Vladimir Putin Wants a Tax Hike

By Leon Aron

ladimir Putin is threatening to raise taxes. Earlier this month he broached the idea of a "progressive tax." The idea, which is sure to provoke widespread resentment from Russians, is one of the most telling signs of the tightening financial straits into which the war on Ukraine is pushing Moscow.

The Kremlin's treasury is being drained by the "special military operation," which costs an estimated \$300 million a day-plus a massive rearmament and Western sanctions. Mr. Putin touts last year's 3.6% economic growth, but it is due mostly to the trillions of rubles the Kremlin has thrown at the military-industrial complex. This "boom" left behind the ci-

weighed down by the 16% central-bank prime interest rate and the hemorrhaging of younger workers to military service, defense work and emigration.

To fund the war in Ukraine, the 13% flat rate would give way to a progressive system.

A piggy bank of last resort, the \$135 billion National Welfare Fund, holds only \$58 billion in liquid assets (dollars, stocks and bonds) with the rest mostly in Chinese currency and gold. Last year Mr. Putin withdrew \$38 bil-

vilian economy, which is raid could empty it.

Still, raising the income-tax rate must have been a difficult decision. From the beginning of his rule almost a quartercentury ago. Mr. Putin's version of taxation without representation had been light taxation in exchange for fake representation. The flat income-tax rate of 13%, in place since 2001, last year generated only 6% of the national budget. Most income-tax revenue goes to regional governments, most of which are heavily in debt and dependent on Moscow for day-to-day operations. Now the cash crunch forces the Kremlin to reach for the bottom of the fiscal barrel, beggaring the provinces.

The new rates of 15% and 20% would affect about 20 lion from the fund. Another million Russians with annual

March 15 poll. She faces chalbent Democrat Bob Casey. A lenges uniting Republicans, having lacerated John McCain. New Mexico could be a sleeper: Nella Domenici. daughter of the late Sen. Pete Domenici, could benefit from Latinos trending Republican and anger at President Biden's restrictive energy policies.

> National Republican Senatorial Committee Chairman Steve Daines of Montana has done a terrific job recruiting candidates and clearing primaries. He has deployed a crack political team, and the map favors Republicans. Democrats have lots more money and, in many races, the powers of incumbency. But if GOP challengers achieve financial sufficiency and turn Democrat officeholders' records into a negative, Republicans could win a Senate

Mr. Rove helped organize the political-action committee American Crossroads and is author of "The Triumph of William McKinley" (Simon & Schuster, 2015).

majority that lasts a decade.

incomes slightly above the national annual average of 860,000 rubles, or \$9,500. The highest Russian earners are concentrated in large cities, where political trouble tends to originate. Hence Mr. Putin's uncharacteristically soft-shoe shuffle of a seemingly casual remark on a top-rated evening talk show. He's preparing the public for what Russian experts called "tax mobilization." The thin line between keeping social peace and paying for the war, which Mr. Putin has been navigating for two years, became narrower still.

Mr. Aron is a senior fellow at the American Enterprise Institute and author, most recently, of "Riding the Tiger: Vladimir Putin's Russia and the Uses of War."

solutions when a bird flies into his apartment. Rather than opening the grated window and shooing it outside, he shoots the bird, then scrubs the blood and feathers off the floor and his copies of Faulkner and Chekhov. A friend remarks that in Iran a bird in the house is thought to be an angel blessing the tenant. "And you killed your angel."

After a particularly violent childhood, the author still sleeps with a baseball bat and still struggles to be the man he wants to be.

At one point Mr. Dubus comes right out and tells us-in the essay where he addresses his inability to love the many dogs in his life—that he is reluctant to fully reveal himself in his writing "because I do not like how it makes me look." In this case, he struggles because dogs are such vivid reminders of the tender, loving child that he felt he had to deny in himself to survive. It's a sentiment stated or implied throughout the book. But his willingness to confront such things and to write about them with unpretentious candor is the source of the book's quiet power.

Growing up, Mr. Dubus resolved to turn himself into someone who could protect his mother and siblings, someone whom bullies would fear. He went at it furiously, and "began to lift weights and box and run and fight...six days a week for hours at a time." The extent of his childhood wound is demonstrated by his dedication to its perceived remedy, in which "the thought of missing even one workout was terrifying to me." He knows that more of the disease is no cure for it, that real manhood is about compassion rather than conflict, that masculinity's highest calling is simply to be of help to others. For him, closing the distance between knowing that and practicing it is a lifetime's work.

In the book's opening pages, Mr. Dubus is building a fence on a sweltering day when a little girl in mismatched clothes and dusty hair attaches herself to him. At first he just wants her gone, but then he learns that her father is dead, that her mom has a boyfriend and that she wishes that her father were still alive and her parents still together. "Something fell away inside me," Mr. Dubus writes. "She looked for a moment like every hard-time girl and woman I'd ever worked with in halfway houses and group homes and pre-parole." Later we'll understand that he is just like that little girl and wants nothing more than to help her cope with what he knows she'll face. He tells her that her father will always be with her, that he loves her too much to ever leave her alone. "He's probably watching over you right now," he says. "Feel this wind?" he asks. "That could be him trying to cool you off."

Mr. Heavey is a writer in Bethesda, Md.

Dickens on Children

"In the little world in which children have their existence, whosoever brings them up, there is nothing so finely perceived and so finely felt, as injustice." -Charles Dickens, "Great Expectations"

REVIEW & OUTLOOK

NBC's Ronna McDaniel Tantrum

he mainstream media seems determined to give ordinary Americans reatantrum at NBC News over the

hiring of former Republican National Committee chairwoman Ronna McDaniel gave them one more.

The network announced its hiring of Ms. McDaniel as a

political analyst on Friday. She would provide, NBC politics editor Carrie Budoff Brown said in an internal memo, "an insider's perspective on national politics and the future of the Republican Party." We hold no brief for Ms. Mc-Daniel as a spokeswoman for conservatives or Republicans, but NBC brass were trying to provide an alternative view of Donald Trump to the one viewers get from the NBC-MSNBC conformity caucus.

Cue the moral outrage. On Sunday Chuck Todd, former host of "Meet the Press," delivered an on-the-air jeremiad against his employers for engaging Ms. McDaniel. He and his colleagues were upset because "many of our professional dealings with the RNC over the last six years," Mr. Todd explained, "have been met with gaslighting."

"Morning Joe" hosts Joe Scarborough and Mika Brzezinski added their disapproval on air. Ms. Brzezinski insisted their objection wasn't to a conservative Republican but to the hiring of an "anti-democracy election denier." MSNBC's Rachel Maddow devoted half an hour to the subject. It's not about whether Ms. McDaniel is a Republican or Democrat, she said, "it's about our system of government and undermining elections and going after democracy."

Ms. McDaniel's chief affront seems to be that she participated in a phone call on Nov. 17, 2020, in which Mr. Trump urged two Republican canvassers in Wayne County, Mich., not to certify the election results. She also said that President Biden didn't win the election "fair." We don't think the election was stolen, and Mr. Trump's post-election behavior was awful, but spare us this high-minded excuse about "democracy."

If these harrumphing stars felt so strongly that challenging election results is unforgivable, they wouldn't have given respectful, at times fawning, interviews to Stacey Abrams, long after she refused to concede the 2018

Georgia gubernatorial race, which she lost by 54,723 votes. We don't recall hearing these desons to ignore it. This week's collective fenders of democracy criticizing Democrats, in-

cluding Hillary Clinton, for The conformity caucus denying that Donald Trump was the legitimate winner in chases the former RNC 2016, or the 31 Democratic chairwoman off the air. House members who, on Jan. 6, 2005, attempted to stop certification of Ohio's electors

and so deny George W. Bush re-election.

Several of these 31 "election deniers," to use Ms. Brzezinski's term-Sheila Jackson-Lee (D., Tex.), Barbara Lee (D., Calif.), Ed Markey (D., Mass.)-have appeared many times on NBC and MSNBC and been treated with deference.

It's also hard to take seriously Mr. Todd's claim that the RNC under Ms. McDaniel was uniquely guilty of "gaslighting." That's the new term for the sophistry, dissimulation and, yes, outright dishonesty that's unfortunately inseparable from partisan politics. Leave aside that many ordinary consumers of news have had ample occasion in recent years to feel "gaslit" by the mainstream press.

The more salient point is that NBC has

On Tuesday the NBC brass bowed to their

The tempest over Ms. McDaniel suggests the press is preparing to make the same mistake again. This is bad for the country, but it's even worse for the press, which still doesn't understand why it is so mistrusted.

LETTERS TO THE EDITOR

Beijing Responds on Hong Kong: Don't Worry

Your editorial "Hong Kong's Giant Leap Backward" (March 20) starts cession and subversion. The other five crimes, such as treason and with the sensational claim that Hong Kong has become "a more dangerous place for foreign businesses, lawyers, journalists and especially local citizens" after the passage of its national-security legislation. The editorial then ends by clamoring, "Enter Hong Kong at your own risk." Well, media alarmism is no surprise.

* *

A Hong Kong journalist told me that when he was traveling to another country a couple of years ago, the hotel owner was surprised to learn that he was from Hong Konghe had thought all Hong Kongers had lost their freedom to travel overseas. Some of the businessmen he met in the U.S. also shuddered at the thought of visiting Hong Kong for fear of being "locked up." Many Western media outlets, including The Wall Street Journal, should take credit for their distorted impression of Hong Kong.

You write the following of Hong Kong's "controversial" 2020 national-security law: "Apparently that's not enough," explaining that a "draconian" new law now comes atop it. This is playing dumb. The national-security law from 2020 covers only two of the seven categories of crimes under Article 23 of Hong Kong's Basic Law, namely, se-

theft of state secrets, weren't included. Further, some existing ordinances in Hong Kong still retain such anachronism as "the Crown" and "Her Majesty," smacking heavily of colonialism, from which Hong Kong has broken free for almost 27 years, if I may remind you.

Labeling Hong Kong's new national security legislation as "sweeping" and its terms "conveniently vague" is a double standard. The new law has referred to the laws of many common-law jurisdictions, including the U.S., and it is consistent with the definitions of terms in different countries' national-security legislation. At the same time, the law fits Hong Kong, taking its reality into consideration.

Your editorial also trumps up another charge against Hong Kong by accusing it of "regarding foreign influence as a threat." No such phrase can be found in the text of the bill.

The editorial asserts that the chief executive of Hong Kong can "now turn his attention to the economy, but it may be too late." Don't be a worrywart. None of the doomsaying has come to pass.

HUANG JINGRUI Spokesman, Commissioner's Office Foreign Ministry of the People's Republic of China in Hong Kong

Repeating the Mistakes of the American Past

A copy of Michael Boskin and Kiran Sridhar's op-ed "Biden's Budget Neglects the Military" (March 15) should be put in every mailbox in America. I am old enough to remember our foolish thinking before World War II,

when it took the Pearl Harbor attack for President Franklin D. Roosevelt to get the country in war-mode thinking.

Even after that, the government instituted food and gas rationing, a 35mile-per-hour speed limit, local home defense forces and more to get the general population behind the war effort. I remember standing plane-observation watch as an 11-year-old, looking for German planes, though it would have been almost impossible for them to fly there. It was all to get us in the correct mind-set.

To be free, we must always be more than ready to defend ourselves and our allies. It is frightening today, with only two good U.S. shipyards, few ammunition-production plants and other supply facilities. We have four large, well-equipped enemies, and no chance of true peaceful agreements.

> **DEWITT PETERSON** Moorestown, N.J.

EVs Are a Forced March to the Grid's Collapse

Regarding your editorial "Biden's EV Mandate Blows Its Cover" (March 21): From where will the base generation come to power all these electric vehicles? The increase in demand for electrical power if the EV regulation were put into effect would be significantly beyond any electric utility plans on the books today.

The "war on fossil fuels" is decreasing the base generation available. Given the state of the grid, this mandate will have many deleterious consequences, with little or no positive effect on the air we breathe and the average temperature in the U.S. The people running the Biden ad-

ministration have determined that the Environmental Protection Agency is the best vehicle to change America without a vote. They use it to implement their will. So much for "save our democracy."

CHARLES E. WEBB Allen, Texas

After reading your editorial on the new EPA mandate and emissions requirements, I have a suggestion for the CEOs of General Motors, Ford, Stellantis and other car companies:

signed up Democratic gaslighters with regularity. Most recently Jen Psaki went straight from the Biden White House to her own show on MSNBC. Ms. Psaki's many White House hits include calling the southern border "closed," denying Americans were stranded in Afghanistan, and threatening tech platforms if they didn't censor certain Covid views.

employees and cut ties with Ms. McDaniel. The network's viewers will be fine without her analysis, but the episode explains why Americans don't trust the news media. The network's bosses were plainly trying to avoid the mistakes of 2016 by recruiting some non-crazy voices on the Trump-aligned right. Eight years ago mainstream outlets covered Mr. Trump with little but withering scorn, alienated millions of Americans who felt deep reservations about Mrs. Clinton, and after the election couldn't explain how he won except by recourse to the false Russian collusion narrative.

Beating the Squatter Epidemic

States are fighting back

to restore people's rights

to their own property.

ikTok's latest contribution to American domestic tranquility is a video by a

for "invading a house in the United States" and taking it from the owner. "I found out that there is a law that says that if a house is not inhabited, we can seize it." Naturally this went viral.

The young migrant may have chutzpah, but he's gamed out President Biden's border abdication and, crazy enough, he's not wrong about his home-invasion scam. Squatters are moving into people's homes uninvited, and once in they can be almost impossible to dislodge.

We saw this in New York last week: When Adele Andaloro tried to rid the house she inherited from her parents of squatters by changing the locks, the cops led her away in handcuffs. The squatters could still make themselves at home.

It's happening all over. In Georgia, Paul Callins found squatters had moved into his home and changed the locks while he was away caring for his sick wife. In Texas, Houston schoolteacher Amberlyn Prather and her family used a fake lease to occupy a Houston home. In California, Flash Shelton retook his mother's house by moving in when the squatters were out-and then claimed squatter's rights himself. Two squatters were arrested Friday in connection with the murder of Nadia Vitel after she confronted them in her late mother's Manhattan apartment this month.

The problem is that most places have laws that give squatters rights after 30 days. If they claim to be tenants, the homeowner usually has to get a court order to evict them, which can take weeks. Until then the cops can't do anything because squatting is a civil matter.

"Squatting in years past was something that generally took place when homes were aban-Venezuelan migrant outlining his plan doned or simply ignored and uncared for," says

David Howard, chief executive officer for the National Rental Home Council (NRHC). "Squatters were typically individuals that were literally in need of shelter from the storm. What we're seeing now is intentional acts of trespassing by people who

know how to work the system."

Some states are wising up. On Wednesday Florida Gov. Ron DeSantis signed bipartisan legislation to let police boot squatters immediately, and apply criminal penalties for anyone presenting a fake lease or doing more than \$1,000 in damage. On Tuesday, the Georgia Legislature approved a bill criminalizing squatting. A Long Island state assemblyman has introduced anti-squatting legislation in New York.

Numbers are hard to come by, but in a survey taken last fall of its members who own single-family rental homes, the NRHC found about 1,200 homes taken over by squatters in Atlanta. It was 475 in Dallas-Fort Worth, and 125 in Orange County, Fla.

The squatters are manipulating the legal system to abuse a fundamental right to property. A legal system that is time consuming and expensive works against actual homeowners. They can't get the squatters out or prevent them from inflicting costly damage. Without the power to remove people squatting in their homes, property rights become meaningless.

More states and cities should look to ban squatters so migrants don't think they can cross the border and take up residence in your home when you're visiting the relatives.

Sen. Schumer Has Long **Played Politics With Israel**

I beg to differ with Joe Lieberman when he claims that Sen. Chuck Schumer has always been a friend of Israel ("Schumer Has Crossed a Red Line Over Israel," op-ed, March 21). Case in point: President Barack Obama's Iran deal.

For months Mr. Schumer kept mum on how he would vote. On the one hand, he didn't want to anger the president by declaring against it. On the other hand, he wanted to keep Jewish support flowing in. So he pretended to think about it. Only when it was clear that the deal would be approved without his support did he announce that he would vote against it.

Mr. Schumer has only one principle: keeping his seat. That's why he keeps quiet about the squad of antisemites in his party. I hope Jewish voters and donors see the light and recognize that Mr. Schumer is no friend of Israel.

> **BAVA COHEN** Brooklyn, N.Y.

Unions Are for the Members

I must respectfully disagree with Terry Takash ("Teachers Union Priorities," Letters, March 25). "The union," he writes, "should be more interested in improving the education of Chicago's youth than in using the students to advance the interests of the union." On the contrary, the Chicago Teachers Union's priorities are exactly where they should be.

Unions-teachers or otherwiseexist to advocate for the interests of their members. That's the teachers, not the kids. Voters need to understand that. Only then will true education reform be possible.

MIKE FISHER Worcester, Mass.

Letters intended for publication should be emailed to wsj.ltrs@wsj.com. Please include your city, state and telephone number. All letters are subject to editing, and unpublished letters cannot be acknowledged.

Just say no.

Our technology and infrastructure is not, and may never be, ready to support a full switch to EVs. But this presumes the demand for these vehicles will somehow materialize. The American public right now, and for the foreseeable future, prefers internal-combustion vehicles.

Automakers must stand united and tell the government that they won't bankrupt their companies and sacrifice tens of thousands of jobs to satisfy the egos of the extreme climate elitists. What is the government going to do in response? Shut down car production in the U.S.? Good luck with that.

> Keith Bair Bethlehem, Pa.

A President We Don't Fear

Ted Wight's March 22 letter is headlined "How About a President Who Isn't Afraid?" It is a criticism of President Biden's meek leadership style-"feckless" is how Mr. Wight puts it.

How about a president we aren't afraid of? I am comfortable with the measured and careful style of a president whose motto isn't "only I can." SHELDON I. SAITLIN Boca Raton, Fla.

OPINION

Why I'm Saying No to NIH's Racial Preferences

By Kevin Jon Williams

o I deserve to jump the line? If I say yes, I may play a leading role in ending the scourge of atherosclerosis—also known as hardening of the arteries. If I play fair, I may lose the opportunity to save people around the world from heart attacks and strokes. I'm angry at the National Institutes of Health for putting me in this position. I'm even angrier it has done so in the name of racial equity.

My quandary comes down to whether I should "check the box" on an upcoming NIH grant application attesting to my recent African heritage. Since at least 2015, the NIH has asserted its belief in the intrinsic superiority of racially diverse research teams, all but stating that such diversity influences funding decisions. My family's origins qualify me under the federal definition of African-American. Yet I feel it's immoral and narcissistic to use race to gain an advantage over other applicants. All that should matter is the merit of my application and the body of my work, which is generally accepted as foundational in atherosclerosis research.

I discovered my African heritage as an adult, though I had wondered about it since elementary school. My father, Ferd Elton Williams, a professor of physics at the University of Delaware, was a Renaissance man who talked with his children about everything-except his background. His skin was dark and his black hair tightly curled, but he fooled everyone by saying that he was a small part American Indian. He hid his birth family even from our mother, revealing only after a decade of marriage and four children together that he had two siblings

My siblings and I slowly gleaned additional information—that two of his four grandparents were members of an African Methodist Episcopal church, for instance—but the full truth long eluded us. I stumbled on it after taking a genetic test in 2011: Through my father, I am part Bantu, a major ethnolinguistic grouping in West, Central and Southern Africa.

I'm proud of my heritage. I'm even prouder of my father, who

overcame poverty and the racism of the early to mid-20th century to become an internationally renowned scientist. He hid his identity, and so have I—until now. In the era of affirmative action, I didn't want my research called into question, as if my papers were published preferentially because of my ancestry. Nor did I

I am of West African origin, but that shouldn't matter in my application for a medical-research grant.

want anyone to doubt my appointments and funding, as if they were racial spoils rather than a reward for good work. Moreover, I have always wanted to be able to look my Asian-American colleagues in the eye—they are at the bottom of the current racial caste system—with the knowledge that I didn't use race to steal an opportunity from them.

In mid-February, the NIH announced it would soon solicit applications for a grant to perform research that I and others have publicly advocated for years—treating atherosclerosis in younger people instead of the current focus on the elderly. Such research would likely prevent the disease's advance, saving countless dollars in healthcare and lost productivity, and, more important, lives. The application process will open in October. I am already assembling a study team.

I want this money, but what's the best way to get it? The NIH's recent announcement commands applicants "to recruit individuals from diverse backgrounds, including individuals from underrepresented groups for participation in the study team." The meaning is clear: Teams that overtly include African-American researchers are more likely to get funding. I don't want to elbow a colleague out of the way, especially one who might have a better application. I'd rather win because my team's application shows the most promise, reflecting decades of work that has helped make this specific NIH initiative possible.

If I refuse to identify myself as

African-American, our application is more likely to lose on "diversity" grounds. It's a double wrong. Not only is the system rigged based on nonscientific—and possibly illegal criteria; it encourages me to join in the rigging.

Truth be told, I made my decision years ago. When my study team files our application, it won't note my West African origins. If we don't get the grant, so be it. I refuse to engage in a moral wrong in pursuit of a moral good—even one as important as saving lives from the leading killer on earth. My father, who struggled against racism to achieve so much on the merits of his own work, would never forgive me for "checking the box" to grab a racebased advantage.

And no matter what happens, I can never forgive the National Institutes of Health for reinjecting racism into medical research.

To Thwart Iran, Fight a War of Attrition

By Seth Cropsey

The tensions between Jerusalem and Washington demonstrate that neither understands the situation. Israel needs to learn to fight an attrition war against a much larger adversary, Iran. The U.S. must accept the strategic requirements of its regional partner, despite the politically driven drivel offered by President Biden, Senate Majority Leader Chuck Schumer, and a Congress that refuses to act. Failure to grasp the conflict's fundamentals will lead to bad policy and, ultimately, calamity.

Iran's objectives are expansive: the elimination of American regional power and the destruction of Israel to clear the path for the Islamic Revolution's ascendance throughout the Muslim world. Its means, however, are relatively limited. Iran lacks the high-tech weapons to take on the U.S. and Israel directly. The Axis of Resistance—its proxy alliance, spanning the Levant and Yemen—lacks the cohesion or capability to conquer Israel.

Israel and the U.S. should focus their strengths on Tehran's weaknesses by jeopardizing its proxies.

Iran's strategy is long-term attrition. It hopes to keep the U.S. and Israel under continuous military stress through Hamas pressure in Gaza and Houthi attacks on international shipping. Iran patiently accumulates operational advantages by building up forces in Syria and Lebanon, squeezing Jordan, and driving the U.S. from its handful of Levantine bases. A key is the al-Tanf complex in Syria, which constrains Iranian logistics and helps shield Jordan from Iranian pressure and smuggling. By creating interlocking strategic dilemmas, Tehran can make it impossible for Jerusalem or Washington to resolve the confrontation with a brief high-intensity operation akin to the 1967

war or the 2003 Iraq war. Iran hopes to compel Israel and the U.S. to turn on each other, leaving both isolated and vulnerable.

Countering Iran will require tolerating more risk. Yet even American willingness to hit back against Iranian harassment of U.S. bases wouldn't yield a swift and straightforward result. Iran would counter, leading to an extended conflict. An extended conflict is all but guaranteed at this point. Large-scale airstrikes on Iranian territory would impose some cost on Tehran but wouldn't destroy its operational capacity. A ground invasion is out of the question for strategic and political reasons. The only remaining option, beyond capitulation, is a long-term campaign that undermines Iranian power projection and destabilizes the Iranian state.

This reality explains the

trouble Israeli and American strategists have had in responding to Iranian actions. For the campaign outlined above is unmistakably one of attrition.

Attrition is a dirty word in American and Israeli strategic circles. In America, it evokes the Western Front's brutal stalemate from 1914 to 1918, during which millions were sent to their deaths, and tens of

North African, Sicilian and Italian campaigns that preceded the invasion of Normandy are examples. The U.S. has seldom fought wars it can win with a single maneuver campaign, making attrition a coherent strategy.

Israeli military thinking avoids attrition for different reasons. An attrition war implies a long one, in which rivals try to outlast each other. Israel's greatest strength is its whole-of-society commitment to survival, which has produced a massmobilization conscript army better trained and with higher morale than almost any comparable force in the world. Israeli society's relative size compared with that of its adversaries is its greatest weakness. Among its immediate neighbors, only Lebanon is smaller. Hence rather than pitting its small but committed society against a larger adversary in a protracted contest, Israel favors rapid campaigns waged offensively, meaning in enemy territory. Since neither the U.S. nor Israel can fight its preferred style of war in the Middle East today, both find it extraordinarily difficult to respond to Iranian actions. Strategy, however, is about placing one's strengths against the enemy's weaknesses. This can be done in an attrition campaign.

Iran's strengths are its size and the support its proxies provide, which allow it to maintain pressure on the U.S. and Israel, absorb damage very little of the cost. While Lebanon's Hezbollah handles essential governing tasks in the country's south, no Axis member formally controls a state. Lebanon, Syria, Iraq and Yemen all exist as legal entities. Thus, they are responsible for the basic, costly tasks of civil administration, such as providing public services, setting economic and social policy, and maintaining public finance.

Iran provides financial backing to its Axis partners, and in Syria and Lebanon to the states themselves. But Tehran still outsources the burden of actual governance to these states, which increasingly lack control over their territory and exist primarily to reduce Iran's direct burden and maintain the fiction of sovereign independence.

Israel and the U.S. have the tools to strike Iranian military capacity in Syria

and Lebanon. This is the operational decisive point of Iran's campaign not Gaza and Yemen, despite the public focus on Hamas and the Houthis. The U.S. and Israel can rapidly degrade state capacity in Lebanon and Syria, forcing Iran to assume direct control of both territories, or to shrink its defense perimeter to Iraq, thereby essentially abandoning its ability to pressure Israel and the

thousands wounded and crippled, for no territorial gains. It also connotes the Vietnam War, when a "body count" approach to measuring battlefield progress failed to defeat the North Vietnamese. American military thought emphasizes "combined-arms maneuver"—the synergistic employment of combined arms, air power, and other elements to collapse the enemy system, as best employed during Desert Storm and Iraqi Freedom.

But most American wars have been won through "attrition" broadly construed—that is, the cumulative effect of pressure applied over time and in many contexts. The over time, and keep the fight away from its borders while threatening Israeli territory. Israel's strength is its conscript army, which can execute operations beyond its borders. America's strength is air and naval power, excellent reconnaissance, and the ability to hit targets almost anywhere in the region.

Israel and the U.S. need to put Iran's strengths at risk. Their most effective approach is to jeopardize the Axis of Resistance, replacing it with actual direct Iranian control over the Levantine powers it employs as legal shields. The Axis' greatest benefit is that it provides the power of an imperial entity with U.S. in the short term.

Winning the Middle Eastern war means ending Iran's existence as a regional threat. It requires accepting the current conflict's fundamentals specifically, understanding that attrition is the only coherent paradigm to apply. The risk is that absent a real grasp of the challenge they face, Israel and the U.S. will talk past—and at—each other, while both fail to develop an effective strategy.

Biden vs. Trump: A Choice, Not an Echo, on Economic Policy

By Alan S. Blinder

he 2024 presidential election is shaping up to be the most consequential election in my lifetime—which isn't a short time.

The stakes could hardly be higher with so much hanging in the balance: voting rights, reproductive rights, how the U.S. treats immigrants, whether Vladimir Putin gets a pass to overrun Ukraine, the future of the North Atlantic Treaty Organization as a bulwark of peace and security—I could go on.

Unlike most elections, economic issues are likely to take a back seat to these and other cosmic issues this time around. But President Biden and his predecessor disagree dramatically on a host of meaningful economic issues as well, and since economics rather than politics is my area of expertise, I'll stick to these.

Start with climate change, a worldwide problem that is becoming less abstract every day. The essential question for U.S. politics is whether the U.S. will be part of the problem or part of the solution. Mr. Biden skillfully pushed the Inflation Reduction Act through Congress. It contains the largest carbon-reduction measures in U.S. history. Donald Trump, by contrast, has called global warming a Chinese hoax. That's quite a difference on an existential economic issue.

Another huge difference between the candidates relates to tax policy. Many provisions of the Trump tax cuts of 2017 are scheduled to expire in 2025. Mr. Trump and congressional Republicans, naturally, want to extend the tax cuts. Mr. Biden and the Democrats don't. Instead, they want to pay for domestic priorities and reduce the budget deficit with higher taxes on the rich and corporations. This is no trivial matter. The Congressional Research Service estimates the 10-year cost of continuing the 2017 tax cuts to be about \$3.5 trillion. The differences between Messrs.

failed. Last November, with his typical MAGA eloquence, he posted on Truth Social: "Obamacare Sucks!!!" Again he promised to replace it, with "MUCH BETTER HEALTHCARE," although he failed to say what that would be. Mr. Biden, by contrast, supports ObamaCare—as do most Americans, according to a February poll from Kaiser.

The presidential nominees have very different views on climate, taxes, trade, entitlements and labor.

The other big entitlements make an interesting trio. You may recall Mr. Biden's ad libbed colloquy with Republicans during the 2023 State of the Union address, in which he cornered them into "promising" not to cut Social Security or Medicare benefits—which is the Biden position.

Despite earlier defenses of Social Security and Medicare benefits, Mr. Trump, in a recent interview, cast doubt on his commitment to these entitlements. When an interviewer asked if he would do something about entitlements, the Washington Post reports that Mr. Trump answered: "There's a lot you can do in terms of entitlements, in terms of cutting and in terms of the theft and the bad management of entitlements." Bad management? The efficiency with which these entitlement programs are run puts private insurers to shame.

What about immigration? About a month ago, Mr. Trump directed his followers in Congress to scuttle a "compromise" bill to bolster the southern border—a bill Mr. Biden and many Democrats had already accepted, partially so that they could move on to other pressing matters regarding Ukraine, Israel, Taiwan and the budget. Mr. Trump, by contrast, preferred to let the border crisis fester so that he could use it as a campaign issue.

More generally, Mr. Biden embraces the traditional American position of welcoming (legal) immigrants. Think Statue of Liberty. In stark contrast, Mr. Trump frets that immigrants are "poisoning the blood" of our country. Hmmm. Doesn't Mr. Trump carry the immigrant blood of his grandparents?

In any case, America needs immigrant laborers to fill millions of jobs, and most immigrants want to work. Without this influx of labor, the supply side of our economy would still be restricting growth and boosting inflation.

On these and other issues, Mr. Biden's policies trump Mr. Trump's.

Mr. Blinder is a professor of economics and public affairs at Princeton. He served as vice chairman of the Federal Reserve, 1994-96.

American Business Stalls in China

Trade cools amid geopolitical tensions and the country's weak economy

BY NEWLEY PURNELL AND CLARENCE LEONG

The decadeslong push by American companies into China is stalling.

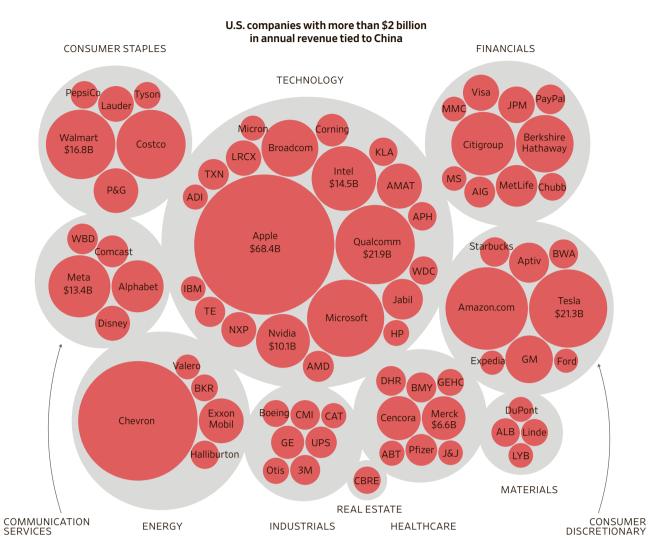

American firms in China are being squeezed by escalating geopolitical tensions, titfor-tat measures on trade and exports, and China's drive for self-sufficiency.

Meanwhile, the Chinese market is becoming less attractive. The country's economic growth fell to its slowest rate in decades last year; consumers there are spending less, especially on foreign brands; and its once-unstoppable export machine is faltering.

The result is many multinational companies are sending less from China, exporting fewer products there and seeing declines in their revenue from the country. The changes have prompted some firms to reduce their investment in China.

American and other multinational firms had accounted for more than half of exports out of China. Now they make up less than a third.

Xi Meets With U.S. CEOs to Ease Anxieties

BY YOKO KUBOTA AND LIZA LIN

Chinese leader Xi Jinping, facing a slowing economy and a sharp fall in foreign investment, sought to reassure American chief executives that China's economy hasn't peaked and that the country is working to improve its business environment.

In a meeting with a group of more than a dozen U.S. business leaders and scholars on Wednesday, Xi also said the two countries should do more

to overcome their differences and increase interactions, according to state broadcaster China Central Television.

The gathering in the Great Hall of the People in Beijing included the heads of two chip makers, **Qualcomm**'s Cristiano Amon and Broadcom's Hock Tan. **Blackstone**'s Stephen Schwarzman, insurer Chubb's Evan Greenberg and FedEx's Raj Subramaniam also attended, according to readouts and footage from CCTV. Frictions between Washing-

ton and Beijing over trade, technology, human rights and a range of other issues have accelerated an unraveling of corporate ties between the world's two biggest economies. Foreign investment into China fell 8% in 2023 from the previous year in yuan terms, and the decline has steepened in the first two months of this vear. That came as China's economic growth dropped to one of the lowest levels in decades in 2023 at 5.2%.

numbers, Xi evoked challenges China's economy had previously overcome despite predictions from outside pundits that it was doomed to collapse.

"In the past, it did not collapse because of talk that it would collapse, and now, it will not peak out, just because of talk that it has peaked," he said, according to a readout from CCTV.

Footage from CCTV showed the Chinese leader smiling broadly and looking uncharac-In a nod to the discouraging teristically upbeat as he talked

about the value of increased engagement, striking a more accommodating tone than in a meeting with American business leaders last year.

The official readout of Xi's comments didn't include any references to the security concerns that foreign business groups had previously raised, including a series of office raids and staff detentions that rattled the foreign business community.

The meeting, reported ear-Please turn to page B2

Gambling **Companies'** Targeting **Tactics** Are Scrutinized

By KATHERINE SAYRE

Federal lawmakers concerned about gambling addiction are starting to scrutinize online betting companies' targeting of big spenders and VIPs.

Sen. Richard Blumenthal (D., Conn.) sent letters last week to eight online gambling companies, including FanDuel and **DraftKings**, urging them to stop using customer data and other marketing tactics to target people with gambling problems.

He noted a report in The Wall Street Journal last month profiling a psychiatrist who tried to quit online gambling but lost more than \$400,000 in less than a year, egged on by perks and thousands of dollars in betting credits doled out by VIP hosts.

"Gambling addiction is so pernicious because it is so prevalent and so rampantly denied as a problem," Blumenthal said in an interview.

Meanwhile, Rep. Paul Tonko (D., N.Y.) said he was working on legislation that would impose federal oversight of online sports betting in any state that has legalized the business.

Seven online gambling companies launched a trade association Wednesday that aims to promote responsible gambling practices, assess the efficacy of industry efforts to avoid problem betting and "promote a new industrywide best practices charter."

Blumenthal is exploring ways that sports-betting companies encourage gamblers, including people with a problem, to continue playing.

The bonuses and credits, the promotions and pitches, the VIP hosts. It has to be seen as a whole, and there may be Please turn to page B4

Disciple of Jobs Leads | Even Star Fashion Designers Struggle **Apple's Public Defense** By CHAVIE LIEBER

BY AARON TILLEY AND KIM MACKRAEL

Software developers and regulators battling Apple over how it grants access to its more than two billion active devices increasingly find themselves at odds with one man: Phil Schiller.

Apple's former chief marketing officer and longtime "minime" to Steve Jobs has emerged as perhaps the most ardent public defender of the company's ecosystem, a vision of electronic devices that work seamlessly together and protect user security and privacy.

Once seen as a virtue, Apple's vision has increasingly come under attack, from regulators in the Justice Department, the European Union and other jurisdictions as well as from rivals including Spotify, Microsoft, Match Group, X and Meta Platforms. Critics see Apple's fees as excessive and have suggested its control of external software is oppressive and impeding innovation.

In legal filings, public announcements and courtrooms, Apple has made it clear that it isn't going to go down without a fight, and more often than not. Schiller has been the one to deliver the message.

"I have no qualms in saying that our goal is going to always be to make the App Store the safest, best place for users to get apps," Schiller recently told Fast Company. "I think usersand the whole developer ecosystem-have benefited from that work that we've done together with them. And we're going to keep doing that."

An Apple spokesman declined to make Schiller available. The spokesman said Apple Please turn to page B5

Edvin Thompson had everything a young designer could hope for: accolades from Vogue and the CFDA, dresses selling at Bergdorf Goodman and a spot on the official New York Fashion Week calendar.

Then, with just two weeks' notice, he canceled his February runway show.

His sponsors had fallen through, he said, which meant he would be paying around \$125,000 out of pocket to stage the show-a move that could put his brand in dire financial straits. The choice was obvious. After he called off the show, he said, "I slept like a baby."

"I want to be here for a long time, not a short time,' Thompson, 31, said on a recent morning from the Manhattan studio of his brand, Theophilio. "And I want my business to stand on its own, regardless of the New York Fashion Week calendar."

It is harder than ever to be an independent designer. Wholesale opportunities are dwindling, as department stores face decline and luxury shopping sites are losing money. Commercial real-estate rates are climbing, ruling out bricks and mortar for most upstart designers, and even indie e-commerce is a financial and logistical challenge. Between materials, studio space, production, labor, marketing and distribution, the costs can be staggering, running from just under six figures into seven for a small indie brand. Even successes like Thompson struggle to make it work.

'The smallest slip-up in finances, or not having an aerial view of your spending, can change things," said Christopher John Rogers, a fellow fashion designer and one of Thompson's friends. "No one

teaches designers how to run a business.'

Through a spokesperson, CFDA CEO Steven Kolb declined to be interviewed but said in an email that the nonprofit trade association "has long admired Edvin's talent."

"Fashion shows, while impactful, represent a significant financial commitment," Kolb added. "It's important to note that there are alternatives to presenting a collection.'

Designers say it has become especially hard to get sponsorship now. Carmakers, tech giants and payment apps that used to pay to have their names featured at fashion shows and brand parties are reassessing how they allocate budget.

Xi Meets With CEOs From U.S.

Continued from page B1 lier by The Wall Street Journal. underscores the elevated stakes for China, which needs continued buy-in from multinationals as it tries to shake the hangover from its self-imposed pandemic isolation.

Around the same time as Xi's meeting with the CEOs, Deputy Secretary of State Kurt Campbell spoke by telephone with a senior Chinese diploan annual business and economic gathering in Beijing, touting the nation's massive market and long-term growth prospects.

Some of the companies that sent executives to meet Xi-including Broadcom, FedEx and Chubb—are major sponsors of the China Development Forum.

The list of Americans who met with Xi also included Stephen Orlins, president of the National Committee on U.S.-China Relations; Craig Allen, president of the U.S.-China Business Council: and John Thornton, a co-chair of Asia Society.

The U.S.-China Business Council said in a statement that its members at the meeting stressed the importance

Trader at Center of Libor Scandal Loses His Appeal at a U.K. Court

By JOSH MITCHELL

LONDON-A U.K. court upheld the landmark conviction of Tom Hayes, the alleged ringleader of a conspiracy among big banks and brokers to rig interest rates during the global financial crisis.

The former UBS and Citigroup trader was one of the few bankers on either side of the Atlantic jailed for misdeeds connected to the 2008-09 crisis. He served half of an 11-year prison term and was released in 2021.

In 2015, a U.K. jury had found Hayes guilty of trying to manipulate the London interbank offered rate, or Libor. The rate reflected how much banks paid to borrow from each other and underpinned trillions of dollars in derivatives and other financial contracts around the globe, including U.S. mortgages and credit cards.

U.K. prosecutors had accused Hayes of conspiring with other bank traders and brokers to try to artificially push Libor up or down to make more money for himself and his employers. Libor—calculated daily by a trade group based on estimates submitted by bankswas phased out last summer. Hayes had appealed the conviction, arguing the jury had

improperly been told that banks couldn't take commercial interests into account when submitting their estimates. His legal team pointed to U.S. court rulings, overturning similar convictions, that found banks could be more flexible in deciding their submissions.

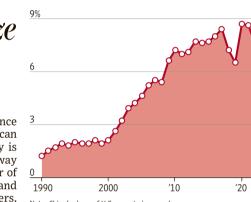

After a three-day hearing this month, a court on Wednesday ruled against him. The court said Libor was supposed to be based on banks' genuine determination of how cheaply they could borrow in markets and that prior court rulings had settled the question that his latest appeal had raised.

Afterward, Hayes told reporters outside the courthouse that he planned another appeal, in the hopes of elevating the case to the nation's Supreme Court.

"It's a very, very sort of 'Alice in Wonderland' situation here," he said. "The discrepancy between us and the rest of the world in relation to this matter is stark. The idea that you can be sitting in America and do something that would be deemed criminal in the United Kingdom is crazy."

The U.K.'s Serious Fraud Office, which prosecuted the case, said the judgment "is clear that these convictions for fraud are still as relevant

today as 10 years ago."

Hayes was the highest-profile of nine U.K. convictions in

the Libor scandal. He said he would continue to try to exonerate himself, in part so his son would no longer have a father with a criminal record. "I was given an egregious sentence that destroyed my life," he said.

The government collected penalties of £900,000 -- equivalent to about \$1.1 million—to recoup what it said were the proceeds of his crime, and he has also spent several hundred thousand pounds in legal costs, the spokeswoman said. Hayes had initially agreed

in 2013 to cooperate with the fraud office, to plead guilty and to testify against his alleged co-conspirators.

In taped interviews, he told investigators he had acted dishonestly. He later said he had never considered himself guilty and his prior admissions were designed to avoid extradition to the U.S.

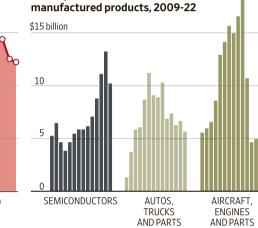

At his initial trial, Hayes argued that his behavior was in line with industry standards; that his bosses knew about, and condoned, what he was doing, and that he never realized his behavior was improper.

A series of Wall Street Journal articles in 2008 raised questions about whether global banks were manipulating the interest-rate-setting process by lowballing Libor to avoid looking desperate for cash during the financial crisis.

More than a dozen banks paid roughly \$10 billion in penalties related to fraudulent Libor activities.

Senior executives at banks including Barclays, Royal Bank of Scotland Group and Dutch lender Rabobank Group lost their jobs.

Last year, an independent commission that reviews potential miscarriages of justice referred Hayes's case to the appeals court.

U.S. exports to China of select

American firms are increasingly choosing to "de-risk" from China. Foreign direct investment had soared after China joined the World Trade Organization in 2001. Now U.S. firms are cutting the funding taps, and the U.S. is restricting some investments.

Companies Feel Squeeze In China

Continued from page B1

China's giant market once provided growth for American exporters, but the country is increasingly turning away from U.S. products in favor of those from other nations and homegrown manufacturers. Autos, aircraft, and semiconductor sales have been particularly hard hit by China's industrial policy and new U.S. export-control policies.

Many multinational companies have seen their revenue from China slide recently. The share of all company revenues earned in China belonging to U.S. firms fell to 10% in 2020 from 16% in 2006, according to

mat, Vice Minister Ma Zhaoxu, for China to rebalance its governboth ments said.

State The Department said the call "part of was ongoing efforts maintain to open lines of communication," noting it touched on the bilateral rela-

tionship, regional issues, plus latory transparency. areas of difference and cooperation, as well as the Korean peninsula and Taiwan and Russia.

The statement said Campell also raised concerns about Chinese "support for the Russian defense industrial base."

The interaction with Xi also comes as American companies are getting squeezed by geopolitics, with sectors ranging from automobiles to aircraft battling to stay competitive in the face of Chinese industrial policy.

Trade in semiconductors has also been disrupted by tight U.S. export restrictions, leading Qualcomm and others in the U.S. chip industry to warn of declining sales.

Xi's message of reassurance followed a speech on Sunday by Chinese Premier Li Qiang at the China Development Forum,

Fashion Designers Struggle

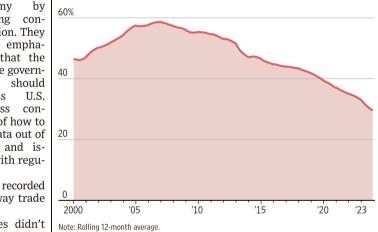

> Continued from page B1 down, it feels like everyone is tightening up," said Maxwell Osborne, co-designer of the fashion label Public School who launched a new brand, anOnly-Child. in 2020.

Mia Vesper, a New York designer, began closing her namesake label in October, citing untenably high operational costs and unpredictable returns. "I've had a day of \$75,000 in sales in 24 hours, because of celebrity, and you think it'll keep going," she said. "But then the next month, it just doesn't.'

Some designers take creative-director positions inside big fashion houses, where they can land a salary and work on a namesake label on the side. Thompson, who is self-taught and runs his brand with a team of five part-time employees, said he would rather grow slowly than work for someone else

ing in the red. "It's a constant struggle when you are paying factories, buying fabrics up front, shipping goods," Osborne said. "You lay out cash, and if you grow, you have to lay out double. It's a vicious cycle. You rob Peter to pay Paul."

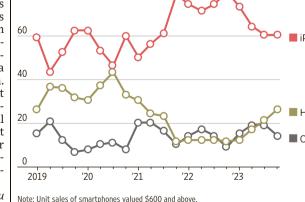

Selling wholesale to department stores doesn't necessarily provide relief, Thompson said. A potential retail partner recently said it wanted to pay him 45 days after receiving his clothes. "That's a month and a half," he said. "My company could be under." To deliver a \$50,000 order of clothing, he said, "you still need \$25,000 minimum up front, and then

you're waiting two months."

Some retailers also have stopped offering deposits. Designers used to get a 30% payment up front, but some stores have stopped offering them, Osborne said.

Taking the plunge to grow the business also comes with risks. Last year, Thompson took out a loan to fill a wholesale order, and the high interest rate threw him into debt.

"It can feel difficult to say, 'Hey, can I borrow some dollars?" Thompson said. "It is not easy for a young designer to navigate within this space. It is entrepreneurship in a recession."

H&M Net Profit Tops Forecasts As Spring Collections Hit Mark Bridge Collapse

Fashion retailer is logging benefit from its program to save \$189 million a year

BY DOMINIC CHOPPING

Swedish fashion retailer Hennes & Mauritz posted forecast-beating earnings as well-received spring collections pushed sales higher during February.

H&M is working through a cost and efficiency program to save 2 billion Swedish kronor, or about \$188.8 million, a year as it works toward lowering prices for customers and achieving an operating margin of 10% this year.

It said on Wednesday that benefits of the program combined with the normalizing of factors that influence purchasing costs as well as good cost control are boosting margins and allowing it to enhance its product offering and provide more value for money.

H&M's Sweden-listed shares up about 15% in Wednesday's trading.

"Our top priority is to strengthen sales, and our target of a 10% operating margin for full-year 2024 thus remains in place," said Chief Executive Daniel Erver.

H&M reported an operating margin of 3.9% in its fiscal first quarter.

Analysts have for some time questioned the attainability of reaching its margin target this year as the company has struggled to gain sales traction amid lower consumer buying-power, rising costs and fierce competition from low-cost, fast-fashion online rivals such as Shein and Primark as well as its larger, more traditional rival, Zara.

"While H&M reiterated their ambition for 10% [earnings before interest and taxes] margin for full year 2024, we remain unconvinced unless they bring up price materially and take a

H&M's operating margin in its fiscal first quarter was 3.9%. It targets 10% for the full year.

significant hit on volume, ness model, H&M counts Asia as which we don't think is susa major sourcing region, so the Red Sea situation could be damtainable," Bernstein analyst aging to its supply chain. William Woods said in a note.

The disruption in the Red Sea also is raising question marks, as ships are being forced to add thousands of miles to their journeys to avoid the area, slowing the delivery of goods and adding to transport costs. Unlike Zara, which has a local-sourcing busi-

He also said the company is accelerating the upgrade of stores, refurbishing around 250 stores globally in 2024, and bringing more sourcing closer to its main markets.

Net profit was 1.21 billion kronor for the quarter to Feb. 29 compared with 541 million kronor a year earlier as sales fell 2.2% to 53.67 billion kronor. Analysts polled by FactSet had expected net profit of 753 million kronor on sales of 53.25 billion kronor.

The company said sales in the period between March 1 and March 25 increased by 2% in local currencies compared with the same period the previous year.

Bernstein's Woods said the company's overall first-quarter results beat expectations across the board, with sales declining less than expected, the 51.5% gross margin much higher than forecast and current performance trending above expectations.

BY WILL FEUER

Carnival warned its fullyear earnings will take a hit from the collapse of a key bridge in Baltimore that has halted vessel traffic at a port Carnival uses.

The cruise operator said on Wednesday it expects the disruption to hit annual adjusted earnings by up to \$10 million. One of the company's Carnival Cruise Line ships sailed yearround out of Baltimore, Chief Executive Josh Weinstein told investors on a conference call.

He said the company has secured temporary space for that ship in Norfolk, Va., "which should help to minimize operational changes."

Shares of Carnival were little changed Wednesday. The stock has run up 96% over the past year.

The company said the Baltimore profit hit isn't factored into its full-year guidance. Carnival raised its full-year adjusted profit guidance by a nickel a share to 98 cents a share.

For its fiscal first quarter. which ended on Feb. 29, Carnival reported a loss of \$214

million, or 17 cents a share, narrowed from a loss of \$693 million, or 55 cents a share, in the comparable period a year earlier.

Stripping out one-time items, including debt-extinguishment and modification costs, the adjusted loss was 14 cents a share.

Analysts surveyed by Fact-Set expected an adjusted loss of 18 cents a share.

Revenue rose almost 22% to \$5.41 billion, below the \$5.42 billion that analysts expected.

Weinstein said the company is succeeding in passing along higher prices to customers without crimping demand. He said customers also booked earlier than they historically have, giving Carnival confidence that it can fill out its ships this summer without needing to roll out last-minute discounts.

Chief Financial Officer David Bernstein said higher prices, higher on-board spending and rising occupancy rates are helping to more than offset the financial impact from the disruption to sailings caused by the conflict in the Red Sea.

The cruise operator said it expects the disruption to hit annual adjusted earnings by up to \$10 million.

Amazon Puts \$2.75 Billion More Into Anthropic, an OpenAI Rival

BY JOSEPH PISANI

Amazon.com said it has invested an additional \$2.75 billion in the artificial-intelligence startup Anthropic, a major investment from a tech giant looking to compete with Microsoft, Google and others in the AI arms race.

Amazon has now invested a total of \$4 billion in Anthropic after making a \$1.25 billion initial investment in the company in September. Amazon said at the time that it could invest as much as \$4 billion. Amazon said it has a minority ownership position in Anthropic.

The funding marks Amazon's largest investment in another company since the online retailer was founded nearly 30 years ago. Google agreed last October to invest up to \$2 billion in Anthropic.

Tech companies and venture capitalists have been throwing money at AI startups following the success of Open AI's Chat-GPT, with investors and analysts increasingly believing the

Amazon Web Services CEO Adam Selipsky and Anthropic CEO Dario Amodei last November at an AWS conference.

latest boom in AI is sustainable. More than \$29 billion was invested in generative AI companies last year, according to research firm PitchBook. Microsoft has agreed to invest \$13 billion in OpenAI.

The investments also can be quite lucrative for the tech companies, which charge the AI startups to use the cloudcomputing services they need to run their products. The Wall Street Journal reported late last year that Anthropic committed to spend \$4 billion on Amazon's cloud platform over the next five years, citing peo-

gambling companies, Blumen-

thal asked more than a dozen

questions about their opera-

tions, including what customer

data is collected and how that

ple familiar with the matter. Months before Google's \$2 billion investment, Anthropic agreed to spend more than \$3 billion on Google Cloud.

Nobel-Winning Pioneer **Of Behavioral Economics**

act

at

BY JUSTIN LAHART

Kahneman, the Daniel Princeton University psychology professor whose work laid the foundations for the field of behavioral economics, died on Wednesday. He was 90.

Kahneman and his friend Amos Tversky, who died in 1996, upended traditional economic assumptions that people consis-

tently OBITUARY rationally and DANIEL with their self-KAHNEMAN interest 1934-2024 heart. Instead,

experiments conducted by the two Israeliborn psychologists showed that when presented with complex situations, people often rely on rules of thumb that can lead them to behave irrationally.

Insights from Kahneman and Tversky's work were widely adopted in many fields beyond psychology and economics, including law, marketing, government, investment management and even the planning of giant infrastructure projects.

The two found that people derive patterns and probabilities based on small sets of data, not understanding the role of randomness-for instance, ascribing skill to a fund manager who beat the stock market a couple of years in a row and not recognizing the role of luck. They also found that people tend to feel losses much more keenly than gains.

This leads to the phenomenon of loss aversion, where, for example, investors are less willing to sell a stock that has fallen below the price they bought it at than they would be to sell the same stock, at the same price, if they had registered a gain.

In a seminal paper in the journal Econometrica in 1979, the two drew upon this tendency to formulate what is called prospect theory.

Largely on the basis of this work, Kahneman won the Nobel Prize in Economic Sciences in 2002—an honor that Tversky, had he lived, would likely have shared.

Gambler **Targeting** Scrutinized

Continued from page B1 aspects of it that should be prohibited or much more rigorously restricted," he said.

Online sports betting and casino games have exploded in the U.S. over the past six years, as more states legalized the industry. A total of 38 states and the District of Columbia have legalized sports wagering, while six states allow online casino games such as slots or blackjack.

Gambling companies rely heavily on top spenders to generate revenue. Companies deploy so-called VIP hosts who form personal relationships with the biggest spenders, frequently handing out betting credits to encourage gamblers to deposit more of their money.

The companies collect customers' betting habits, including gathering data on how much time players spend on the app, how much they gamble, what kind of bets they place and how much they lose. Psychologists who study gambling addiction say that data could be used to identify customers with a problem.

Blumenthal said the companies should use that approach and proactively offer treatment services and self-exclusion, which is an option for gamblers to have themselves banned on the apps. In his letters to the eight

information is used. Blumenthal also asked whether the companies would agree to end VIP hosting programs. Blumenthal sent letters to FanDuel, DraftKings, BetMGM, Caesars, Fanatics, ESPN Bet, Betfred and Bet365. The companies either didn't comment

to the Journal on Blumenthal's letter or referred questions to the American Gaming Association, a gambling-industry lobbying group that has opposed federal regulatory intervention.

Chris Cylke, the AGA's senior vice president for government relations, said it is concerning that policymakers assume player data is being used to harm customers because the industry has already been discussing how artificial intelligence can improve efforts under way to fight problem gambling.

In January, Blumenthal and Rep. Andrea Salinas, an Oregon Democrat, introduced legislation that would direct half of a federal sports-betting excise tax for gambling addiction treatment and research through the Department of Health and Human Services. The tax was estimated to bring in about \$250 million in 2023, according to the National Council on Problem Gambling.

In Tonko's proposal, new rules would include banning advertising during live sports events, banning credit cards as a form of payment and prohibiting companies from using artificial intelligence to track players' habits.

Apple Turns To Disciple Of Founder

Continued from page B1 complies with the law in countries where it does business and in a way that protects the user experience that its customers value.

Although Schiller retired from his role as chief of marketing in 2020, he continues as an "Apple Fellow," a transition that led some Apple watchers to wonder whether he was close to retirement. Instead, he has become the public face of Apple's efforts to defend itself.

He served as a primary company witness in "Fortnite"maker Epic Games' antitrust lawsuit against Apple in 2021. On the stand, Schiller made the case that Apple had invested in the store, worked to create a level playing field and avoided charging for certain kinds of apps. Apple largely prevailed in the case.

On social media and in media interviews, Schiller has frequently made it clear that Apple doesn't intend to yield to developer criticism. In February, he chided the chief executive of Epic Games for criticizing Apple's plan for complying with a new law called the Digital Markets Act in Europe requiring it to allow software downloads outside of the app store.

"Your colorful criticism of our DMA compliance plan, coupled with Epic's past practice of intentionally violating contractual provisions with which it disagrees, strongly suggest that Epic" doesn't intend to follow the rules, he wrote in a Feb. 23 email that Epic published online. In March, Apple said the company had canceled Epic's developer account, drawing criticism from an EU enforcement official. Apple reversed the decision shortly thereafter.

Schiller has warned that the new EU rules might lead to objectionable content that the App Store has always sought to prevent and said Apple was try-

Phil Schiller has become the public face of Apple's efforts to defend its 'walled garden.'

ing to minimize new security risks.

The 'walled garden'

Schiller's strident advocacy is emblematic of Apple's internal rancor over the fight, which many see as an existential challenge to the "walled garden" of controlled and connected devices and software that dates back to Jobs, the company's co-founder.

Other Apple executives including Chief Executive Tim Cook have also defended its approach. Cook, who often allows lieutenants to handle their areas of responsibility, defers to Schiller on some App Store matters, people familiar with the company said. Schiller oversees the App Store alongside marketing head Greg Joswiak and services chief Eddy Cue, but Schiller has acted as its most prominent advocate.

In its antitrust lawsuit against Apple filed Thursday, the Justice Department invoked its case against Microsoft filed in 1998 and noted that Jobs used to rail against what he viewed as Microsoft's anticompetitive tactics to protect its dominance in the PC market.

After so many years of fighting, Microsoft changed tack after settling the case in 2001, promoting Brad Smith to gen-

eral counsel the following year. In Smith's pitch to Microsoft's board of directors to take the job, he presented them with a single slide that said: "It's time to make peace."

Such a detente is unlikely for Apple while Schiller remains at the company, said Phillip Shoemaker, who ran the store's review group under Schiller until 2016. "He's a brick wall when it comes to these matters," Shoemaker said. "I just don't think he's ever going to leave."

Apple has strongly denied any comparisons with the Microsoft case. In response to the Justice Department, Apple said it plans to "vigorously" defend against the lawsuit. "It would also set a dangerous precedent, empowering government to take a heavy hand in designing people's technology," a spokesman said in a statement on Thursday.

In Europe, Apple was fined about \$2 billion earlier this month over allegations related to its App Store policies and the company is the subject of two investigations under a new EU digital competition law.

Schiller, 63 years old, who had worked at Apple earlier, returned to the company in 1997 and quickly became one of Jobs's closest confidants as the co-founder turned the company around from the brink of bankruptcy. He worked on the development and marketing of almost every product that aided in Apple's rise, including the iPod's click wheel because he thought users needed a way to scroll through songs with just one hand.

People close to Schiller describe his three main hobbies as cars, Boston sports teams and Apple, where he is still known to work nearly 80 hours a week, respond to emails almost immediately and answer phone calls at any time. He is also heavily involved in philanthropic endeavors, including an institute at Boston College, his alma mater, that carries his name, the Schiller Institute for Integrated Science and Society.

Carrying Jobs's torch

Schiller was an early supporter of welcoming third-party apps onto the iPhone, but he and other executives had to convince Jobs, who was wary of allowing a software experience over which Apple couldn't maintain tight control. As executives including Schiller came up with a process that would allow Apple to closely review any software allowed on the phone, Jobs eventually bought into the idea and launched the store in 2008, about a year after the iPhone came out.

Apple came around to taking a 30% commission on paid apps or services purchased in the App Store. Initially, Jobs said in 2008 that the company didn't "intend to make money off the App Store," according to documents that came out in the Epic case.

After Jobs's passing in 2011, Schiller kept Jobs's philosophy alive across everything he did. The two were close, and Schiller often mirrored Jobs's fierce competitiveness and tendency to praise Apple and disparage competitors. Inside Apple, he came to be referred to as Jobs's "mini-me" due to the manner in which he often mirrored the company co-founder's perspective. "Of the people still at Apple, he is one of the few that still carry the torch of Steve Jobs's vision," said Tim Bajarin, a longtime Apple analyst who has known Schiller since his return to the company.

One thing Jobs insisted on in the App Review process is that the company should always have someone reviewing each app that made it into the store. Schiller continued that tradition, eschewing excessive use of artificial intelligence in favor of reviews and careful curation.

The App Store continued to grow. By 2016, the money Apple was making from the App Store surpassed its iPad or Mac sales, according to internal documents revealed at the Epic trial.

But soon app developers began making their long-simmering unhappiness with the App Store known, Schiller attempted to make small concessions. He had proposed reducing App Store fees as far back as 2011, according to documents in the Epic case. At the height of developer backlash in November 2020, he reduced the company's commission to 15% for apps that make less than \$1 million a year. Those price cuts haven't hurt the App Store's revenue. The company's services unit, which includes other businesses, topped \$85 billion in revenue in the most recent fiscal year and has continued to grow at a brisk pace. Schiller and other top company leaders are determined to keep developers and antitrust enforcers in the U.S., Europe and beyond from changing that.

Musk's xAI To Give Premium X Users Grok Chatbot

By KIMBERLEY KAO

Elon Musk's artificial-intelligence company will make its Grok chatbot available to all premium subscribers of socialmedia platform X, extending a rollout from the intertwined businesses that began late last year.

Musk said on Tuesday in a post on X, formerly known as Twitter, that the technology would be enabled for all premium subscribers of the platform this week.

The chatbot from xAI, a rival to OpenAI's ChatGPT, was previously available to X's highest, ad-free subscription tier.

The platform continues to have a free tier that allows users to post on the platform without premium features.

X has said it has about 250 million daily active users on average so far this year, with monthly users at 550 million. While it hasn't publicly disclosed a breakdown of its users by membership tier, research firm Statista has estimated that the platform had about 640,000 premium subscribers as of last April, back when there was only one paid subscription service tier for users.

xAI unveiled Grok as its flagship product in early November, moving quickly to integrate it with X amid rising interest in AI chatbots globally.

Musk has drawn on the two companies' overlapping financial backers, technology and data to help jump-start xAI, founded last year, while seeking to leverage AI to turn around X's business and transform the platform into an "everything app."

Behind the Boom: Key Drivers of the United Kingdom's Tech Growth

The United Kingdom's fertile ground for high-growth companies is driving innovation across sectors like artificial intelligence, healthcare and financial services. This is a result of a meticulously crafted ecosystem designed to nurture pioneering technology.

Overseas investment in the United Kingdom's tech startups reached \$21.3 billion in 2023, surpassing investments in France, Germany and Sweden combined. This outstanding growth, coupled with strong policies and investor resources, has fueled optimism among industry experts.

"I invest in the UK tech sector because it offers a winning combination," says entrepreneur, angel investor and digital sector expert Sherry Coutu. "The regulatory environment makes it conducive for businesses to thrive and there's a wealth of talent capable of scaling companies, backed by a strong track record."

Currently, the U.K. boasts nine decacorns and over 200 unicorns and soonicorns (valued over \$10 billion, \$1 billion and \$500 million respectively), indicative of a thriving ecosystem of high-value tech companies. In 2023, the combined economic impact of these fast-growth firms amounted to £50.4 billion added to the U.K. economy.

AI: Beyond the Code

With an AI workforce of over 50,000 and AI contributing £3.7 billion (\$4.7 billion) to the economy in 2022 alone, the U.K. demonstrates a robust commitment to progress driven by emerging technology.

Palantir, a U.S. leader in big data analytics, has chosen London as its new European HQ, while startup Quantexa is pioneering an Al-powered decision intelligence platform to prevent financial crime. Major investments from companies like Microsoft—which recently announced \$3.2 billion in investments over three years—highlight the enduring importance of scaling data-center infrastructure for Al-driven innovations. It's a sentiment echoed by other U.S. tech giants and reinforced by the U.K. government through initiatives like the Science and Technology Framework, along with a £1 billion (\$1.26 billion) fund dedicated to supercomputing and Al research.

Revolutionizing Finance, Life Sciences and Healthcare

The U.K. maintains its status as one of the most fintech-friendly nations globally with its access to legacy financial institutions and pioneering

Open Banking regulations. This vibrant sector is the base for numerous leading fintech firms such as Onfido and Starling Bank and encompasses over 1,600 firms, a figure anticipated to double by 2030.

Coutu also points to several "exciting trends in AI", mostly in life sciences, deep tech and learning. "The environment is perfect to give us a multiyear head start on other countries," she adds. This head start is clear at the intersection of AI and healthcare for improving patient outcomes and streamlining healthcare processes. In terms of government support, the AI Fund earmarks £100 million (\$128 million) to healthcare, focusing on areas with the greatest potential for breakthroughs in treating previously incurable diseases.

As startups grow into scaleups and unicorns, the U.K.'s tech ecosystem, harboring companies now valued over \$1 trillion, moves closer to the nation's goal of being a science and technology superpower by 2030.

"

The U.K. is a great place to breed unicorns because the community is focused on ripping down barriers to growth faster than they appear. *Sherry Coutu, Entrepreneur, Angel Investor and Digital Sector Expert*

THE WALL STREET JOURNAL.

BIGGEST 1,000 STOCKS

| How to Read the Stock Tables The following explanations apply to NYSE, NYSE Arca, NYSE American and Nasdaq Stock Market listed securities. Prices are consolidated from trades reported by various market centers, including securities exchanges, Finra, electronic communications networks and other broker-dealers. The list comprises the 1,000 largest companies based on market capitalization. Underlined quotations are those stocks with large changes in volume compared with the issue's average trading volume. Boldfaced quotations highlight those issues whose price changed by 5% or more if their previous closing price was \$2 or higher. | Stock Sym Close Chg Stock Sym Close Chg Stock Sym Close Chg Stock Sym Close Chg FoxB FOX 28.60 0.65 I Kaspikz KSPI 125.92 2.03 NatWest NWG 6.78 0.09 SuperMicroComp SMCI 1023.29 -1.77 UnitedRentals URI 720.15 15.34 Francklinkscs BEN 27.63 0.91 Keinvue KVUE 2.14.50 0.44 NetApp NTES 103.40 -0.47 Repligen Refer Nation SuperMicroComp SMCI 1023.29 -1.77 UnitedRentals URI 720.15 15.34 FreaportMcM FCX 45.88 11.55 KeurjoPrepper KDP 30.59 NetApp NTES 103.40 -0.48 SynchromyFinil SYF 2.08 NTE 103.23 -0.57 SynchromyFinil SYF NetApp NTE 103.40 -0.48 NustrepublicSyces SSynchromyFinil SYF NustrepublicSyces SynchromyFinil SYF NustrepublicSyces SynchromyFinil SYF NustrepublicSyces Sy |

MARKETS & FINANCE

S&P Breaks Three-Day Losing Streak

Merck jumps 5% to record after getting U.S. approval for new lung drug

BY JACK PITCHER

Major stock indexes rose modestly, with the S&P 500 snapping a three-day slide to close at a record.

The S&P 500 rose 0.9%, while the Dow Jones Industrial Average added 1.2% and the Nasdaq Composite closed 0.5% higher.

WEDNESDAY'S The S&P MARKETS 500 is little

changed on the week but heading for a spectacular first quarter, currently up 10% year to date.

'It's healthy that we're seeing the market move more or less sideways right now," said Steve Sosnick, chief strategist at Interactive Brokers. "If the broad market is just shooting higher all the time without pause, that's a runaway train."

The benchmark 10-year Treasury yield declined to 4.195% from 4.233% the prior day, reversing its recent climb.

Bullish investors have cheered the combination of a resilient economy, slowing inflation and a Federal Reserve that last week signaled it still expects to cut interest rates three times the rest of the

year.

Recently, signs of market froth reminiscent of the zerorate days of 2020 and 2021 have popped up.

Bitcoin is trading near a record and meme-stocks have seen a revival. The latest example: Trump Media & Technology, the parent company of the former president's socialmedia platform Truth Social, jumped 14% after climbing 16% on its first day of trading Tuesday. The company closed with a \$9 billion market cap.

Meanwhile, chief financial officers are growing more optimistic on the economy. The latest CFO Survey from Duke University and the Federal Reserve Banks of Richmond and Atlanta showed a widespread pickup in optimism.

CFOs revised their expectations for real GDP growth higher and increased expectations for their own firms' financial prospects compared with the previous quarter.

Sosnick questions whether rate cuts are necessary in light of roaring markets and a strong economy.

"Does the Fed really need to cut rates if all this is going on? If we have all this speculation, does it not tell you that financial conditions are loose enough?" he added.

Not all meme stocks are soaring. **GameStop** shares tumbled 15% after the com-

Bitcoin fell \$796.80, or 1.15%, to \$6,8641.21 Wednesday, but has been trading at near-record levels in recent weeks.

quarterly sales.

Among single stocks Merck was one of the S&P 500's best performers, rising 5% to a record after its new drug treating a potentially deadly lung disease was approved in the U.S.

Cintas shares jumped about 8% to also close at a record after the uniform rental and business services provider raised sales and earnings guidance.

In commodities markets, benchmark Brent crude for May delivery lost 16 cents, or 0.2%, to \$86.09 a barrel.

Bitcoin fell \$796.80, or 1.15%, to \$6,8641.21.

Overseas, Japan's yen fell to its lowest level against the dollar since the 1990s, as expectations wane that the Bank of Japan will raise rates again soon. Its decline boosted the

ear Mr. Trump, Congratulations! You have finally managed to make it as a multibillionaire, at least on paper—and thanks to the meme-ification of your **Trump Media & Technol**ogy Group under the ticker DJT, you are in the unusual position of being majority owner of a company bigger than some members of the S&P 500. Now comes the hard part: turning it into cash. You have a few options, but the bad news is that none of them are assured.

\$500 million secured on your Bed Bath & Beyond share price DJT holding would be small compared with its current \$30

value on the stock market. But as you know, your lenders have been running scared, and they might quibble with taking a chunk of stock in a money-losing business that managed only \$5 million (yes, million) of sales from 2021 to the end of September 2023.

Speaking frankly, you

GameStop CEO Ryan Cohen

reveals purchase.

don't need to worry.

Cash can also be extracted

through license fees for the

Trump name, just as with

your real estate. After all,

what would DJT's Truth So-

cial be without you? You can

you walk away, this business

ready have the right, accord-

has zero value. And you al-

ate the existing terms—if

Trump Media & Technology Group share price*

it cashed in, raising \$272 million by issuing "APE" preferred shares. The MAGA ticker has already been used by the minuscule America First ETF, but TRMP is still available, or just issue more DJT stock. The stock market loves you, but you've got to turn that into real money.

All this requires recognizing a fundamental truth about Truth Social: This val-

uation can't last. Sure, if you win the election it could be the outlet for the White House bully pulpit. But even on generous assumptions of a 30% profit margin and a valuation of 25 times earnings, it would need revenue of \$1 billion a year. That's an implausible step up from \$3.3 million in the first nine months of last year. Get as much cash out as quickly as you can, before the memes evaporate.

The bills, dated April 2, 2024, mature on July 30, 2024 SEVEN-YEAR NOTES \$112,406,413,600 \$43,000,000,600 \$120,968,600

Bids at Cusip The n 2031.

Sell stock. Your nearly 60% stake is worth \$4 billion on paper, but a simple sale would have to be disclosed and is sure to go down badly with other shareholders. When Ryan Cohen, chairman and CEO of **GameStop**, sold his stake in Bed Bath & Beyond in 2022, the price halved in two days.

His meme followers weren't happy (nor was the Securities and Exchange Commission), but at least he wasn't hoping for their votes in the presidential election. You have to get permission from the board to sell too, but directors including your son are hardly likely to object.

Borrow against the stock. This eases the disclosure

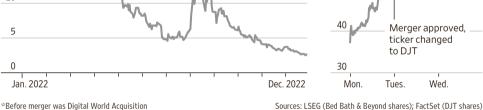

rules, and a loan of, say,

could make more selling MAGA hats, and if the bankers look at the financials (purely as a formality) they might worry about the risk of DJT shares.

Related-party transac-

tions. DJT has almost \$300 million in cash from the SPAC merger. And the company might be able to borrow more. (Perhaps issue junk bonds, as you did so effectively in Atlantic City?) Doing a deal with one of your other businesses is one way to extract the cash. Judge Arthur Engoron ruled that you overvalued your Florida beach club, among other properties, but he would be forced to eat his words if you sold Mar-a-Lago to DJT for \$500 million. Overvalued? Pah.

"Buying assets from the founder [of a company] is one of the things that's very hard to guard against," explains Dan Davies, a financial analyst and author of "Lying For Money," a his-

tory of financial frauds. ing to your agreement with Truth Social, to take your "It's the blue-chip way to extract money. The only messages elsewhere as long guard is having a board as you say they are political. that's not completely su-These days, what isn't politipine." It would be unfair to cal? Plus the company could call a board that has only easily employ a few more just been elected "supine," family members, and perbut it does look a lot like haps order a few thousand copies of your book. one of your political-action committees. You probably

There is some risk to the strategy. Delaware courts usually defer to the board for business decisions, but if directors seem to be in the pocket of a shareholder or the CEO they are more willing to look at whether the decisions are reasonable-as Elon Musk discovered with his \$56 billion pay package. Maybe you should move DJT from Delaware to Texas to get less-intrusive courts, as Musk says he plans to do with **Tesla**.

Raise more cash for the

company. It would be unusual to issue new stock so soon after listing, but you have to take advantage of these ludicrous valuations while you can. Remember VinFast Auto? It's a Vietnamese electric-car company, no reason you should remember, except that it was briefly "worth" \$190 billion last summer when the memes were with it, and is now worth \$11 billion.

Cinema chain AMC Entertainment stock also lost its meme status, but at least

Outright fraud. Clearly

this is not to be recommended. If you win the White House you can (probably) pardon yourself, but if you lose, you don't want to go down as the man who ripped off his own voters.

Anyway, you shouldn't need fraud to get at the money in DJT. As Mr. Davies put it, "if you've got a compliant board and you're not taking cash out of a company you control, I would say you're not trying."

Yours,

James Mackintosh
